

Drought Report for the Week of May 14, 2015

County-wide drought declarations go through a three-part process before securing a drought declaration from the Governor's Office.

First, County Commissions meet to determine whether they want to seek a Governor's declaration. Counties that have made this determination and are currently asking for the state's help are: Deschutes, Grant, Jackson, Josephine, Lane, Morrow and Umatilla County.

Second, these recommendations go to the Water Availability Committee (chaired by the Oregon Water Resources Department) and then the Oregon Drought Council (chaired by Oregon Emergency Management) for technical review. The next meeting of the Water Availability Committee and Oregon Drought Council is May 14, 2015.

Finally, if approved for drought declaration, the Governor's Office issues an Executive Order, declaring drought in specific counties. In recent years, these Executive Order have been set to expire at the end of a calendar year. A Governor's declared drought is in place for 2015 in the following counties: Baker, Crook, Harney, Klamath, Lake, Malheur and Wheeler. A Governor's Drought Declaration allows the Water Resources Department to issue emergency drought permits to applicants, using an expedited process.

Current Water Conditions: Snow pack conditions throughout the state average less than 7% of normal, signaling early and prolonged drought conditions throughout South and East parts of Oregon. Statewide average precipitation is less than 87% of normal.

Oregon Basin Outlook Report

May 1, 2015

Oregon 2015 Peak Snowpack

Across Oregon, much of the winter's precipitation fell as rain rather than as snow, causing sixty percent of the long-term snowpack monitoring sites to set new records for the lowest and earliest peak snowpack in over 30 years. Due to the warm mountain temperatures, one third of snow monitoring sites in the state didn't receive enough snow to build a lasting snowpack at all this year. The current snowpack deficit means that the mountains are missing several feet of water, normally frozen in the high elevation snowpack, that usually serves as a natural reservoir to feed streams and rivers throughout the summer. Because of the record low snowpack, water users depending on streamflow without access to reservoir storage should expect water shortages this summer.

DROUGHT

Current Basin Water Status

Basin #	Basin Name	Basin Status	Reason
1	North Coast	Below Normal	
2	Willamette	Below Normal	Below normal streamflow; Dry Forecast
3	Sandy	Below Normal	Below normal streamflow; Dry Forecast
4	Hood	Below Normal	Below normal streamflow; Dry Forecast
5	Deschutes	Drought Likely	Reservoirs are near full
6	John Day	Drought Unavoidable	No Storage or Snowpack; Dry Forecast
7	Umatilla	Drought Likely	Reservoirs are roughly 50%; Dry Forecast
8	Grande Ronde	Below Normal	Snowpack >5000'
9	Powder	Drought Unavoidable	Reservoir Storage is mixed; no snowpack
10	Malheur	Drought Unavoidable	Reservoir storage is near empty
11	Owyhee	Drought Unavoidable	Reservoir storage is near empty
12	Malheur Lake	Drought Unavoidable	No reservoir storage; No snowpack
13	Goose & Summer Lake	Drought Unavoidable	Reservoir storage is near empty
14	Klamath	Drought Unavoidable	Stressed soil; No snowpack
15	Rogue	Drought Likely	Lack of snowpack; Reservoir storage is decent
16	Umpqua	Drought Likely	Weak Snowpack; Dry Forecast
17	South Coast	Below Normal	
18	Middle Coast	Below Normal	

Definitions

Normal	<i>Water supply is not atypical.</i>
Below Normal	<i>Water supply under what is needed to meet normal demands.</i>
Drought Likely	<i>Water supply likely to fall well short of meeting normal demands.</i>
Drought Unavoidable	<i>Water supply will fall well short of meeting normal demands.</i>

Oregon SNOTEL Current Snow Water Equivalent (SWE) % of Normal

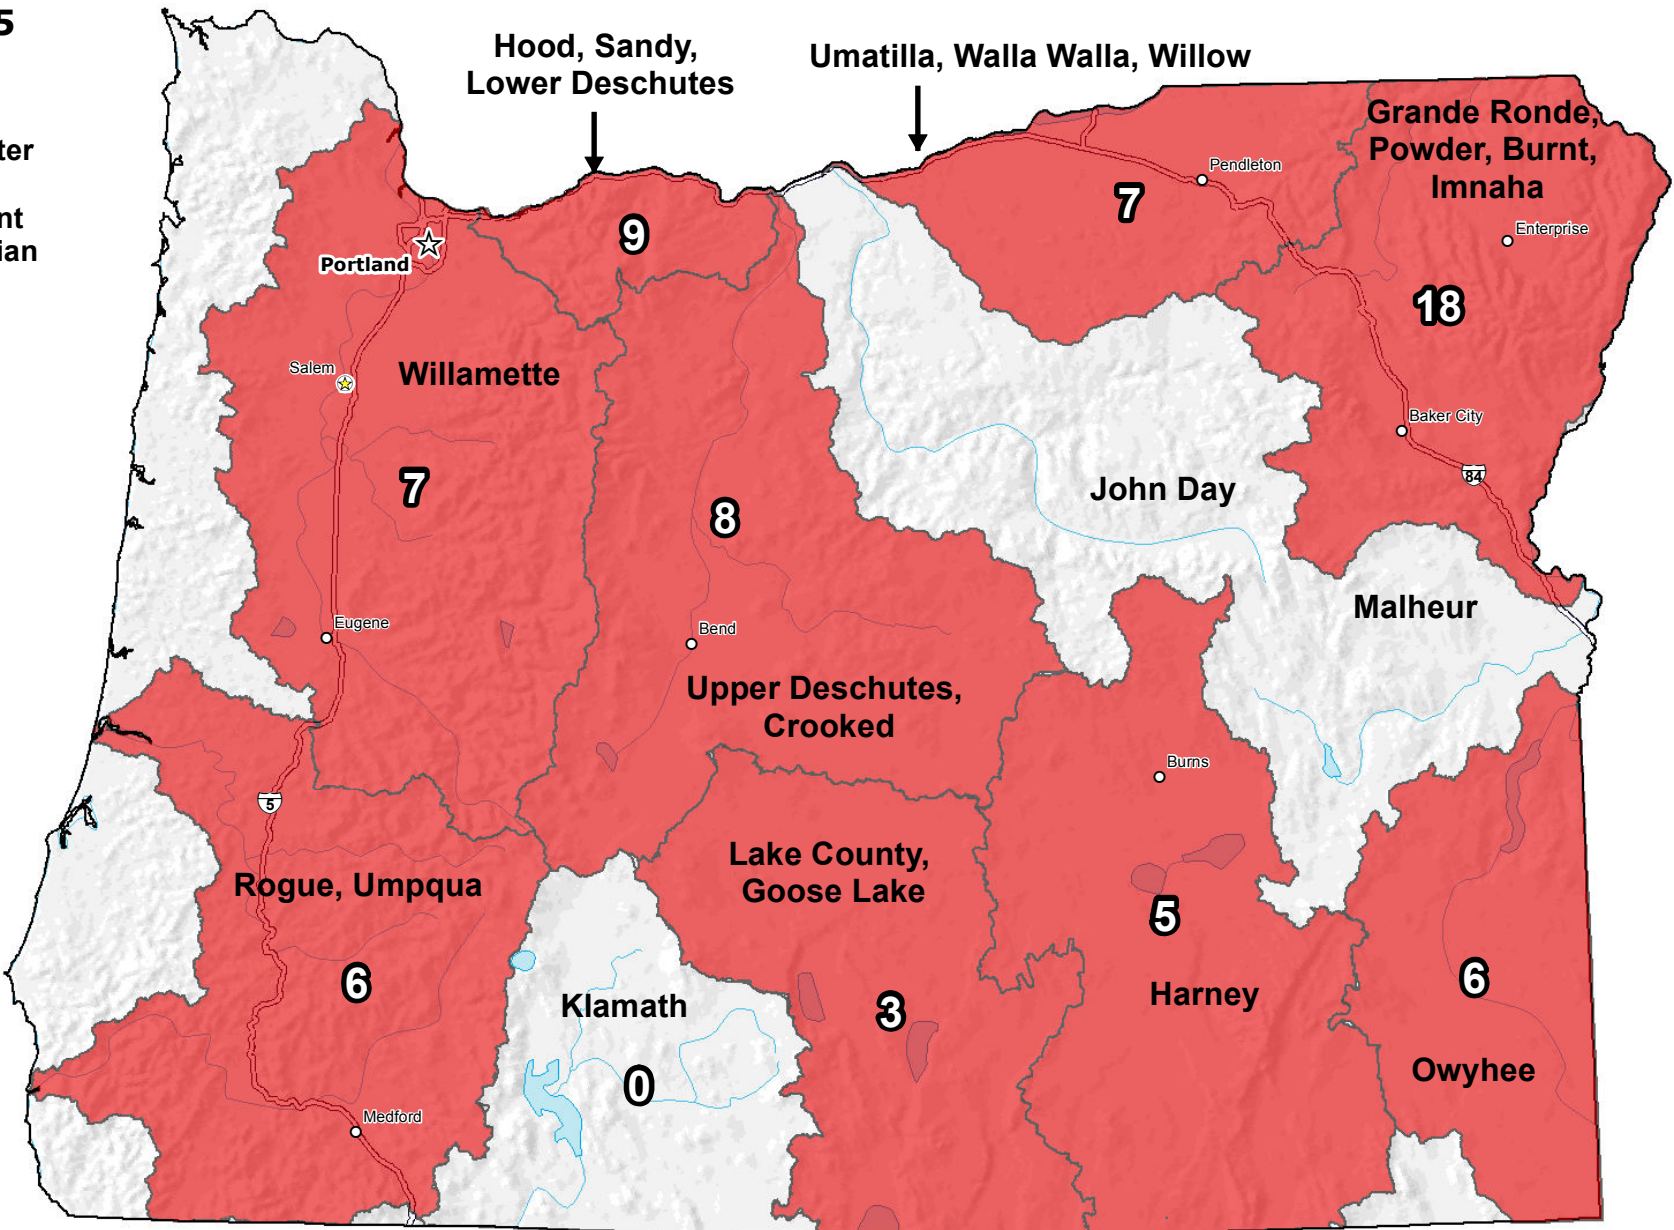

May 14, 2015

Current Snow Water Equivalent (SWE) Basin-wide Percent of 1981-2010 Median

* Data unavailable at time of posting or measurement is not representative at this time of year

**Provisional Data
Subject to Revision**

The snow water equivalent percent of normal represents the current snow water equivalent found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. Data based on the first reading of the day (typically 00:00).

Prepared by:
USDA/NRCS National Water and Climate Center
Portland, Oregon

Oregon SNOTEL Water Year (Oct 1) to Date Precipitation % of Normal

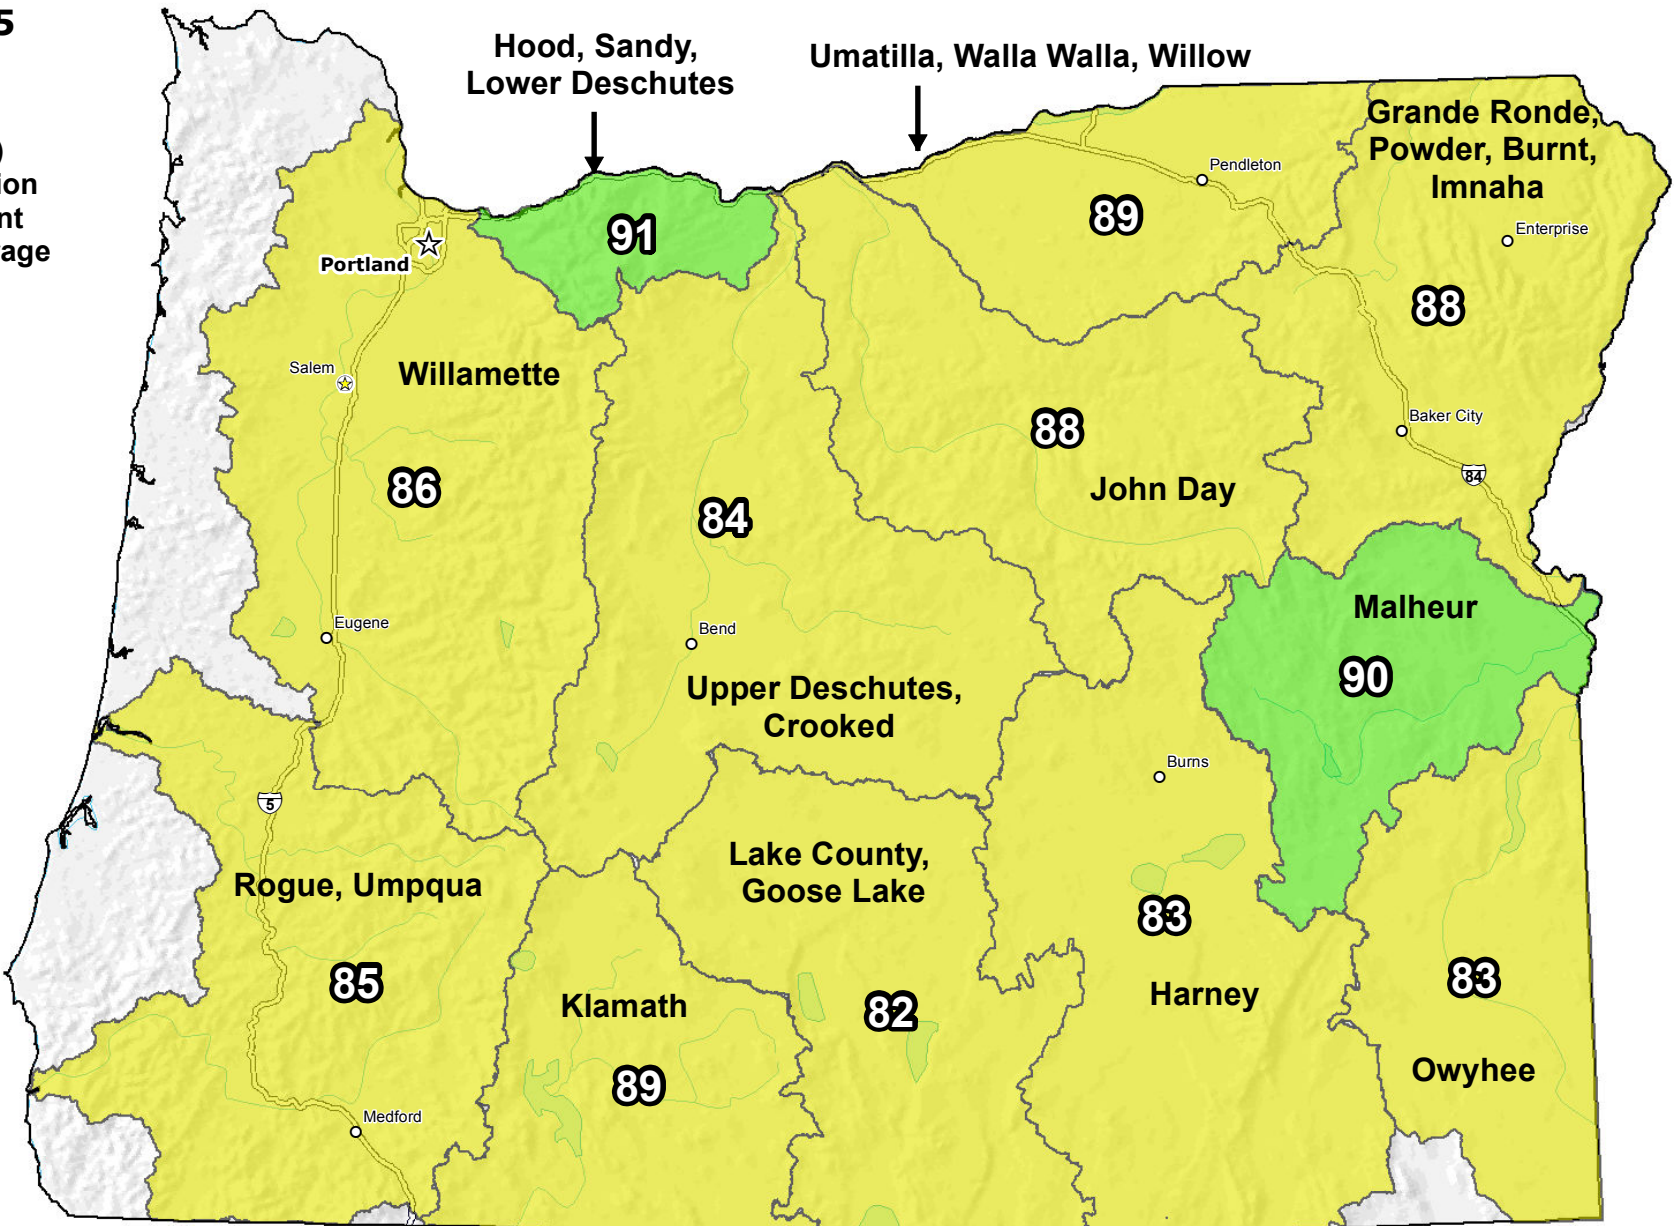

May 14, 2015

Water Year (Oct 1) to Date Precipitation Basin-wide Percent of 1981-2010 Average

* Data unavailable at time of posting or measurement is not representative at this time of year

**Provisional Data
Subject to Revision**

The water year to date precipitation percent of normal represents the accumulated precipitation found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. Data based on the first reading of the day (typically 00:00).
