

Drought Report for the Week of September 14, 2015

Current Water Conditions: In the final Water Supply Outlook for 2015, the NRCS reported that State-wide, Oregon's snowpack this winter peaked at the lowest levels measured in the last 35 years. Many snow monitoring sites set records for the lowest peak snowpack and earliest melt-out date since measurements began. For the three month period of May through July 2015, Oregon recorded the warmest average temperatures since 1895. Consequently, streamflow is expected to be well below normal through the end of summer, especially in the more arid regions of the state. The current statewide average precipitation is 87%.

County-wide drought declarations go through a three-part process before securing a drought declaration from the Governor's Office.

First, County Commissions meet to determine whether they want to seek a Governor's declaration. Counties that have made this determination and are currently asking for the state's help are: Marion County.

Second, these recommendations go to the Water Availability Committee (chaired by the Oregon Water Resources Department) and then the Oregon Drought Council (chaired by Oregon Emergency Management) for technical review. The Oregon's Drought Council will meet if needed. The Water Availability Committee will convene if requested by the Drought Council.

Finally, if approved for drought declaration, the Governor's Office issues an Executive Order, declaring drought in specific counties. In recent years, these Executive Order have been set to expire at the end of a calendar year. A Governor's declared drought is in place for 2015 in the following counties: Baker, Coos, Crook, Curry, Deschutes, Douglas, Gilliam, Grant, Harney, Hood River, Jackson, Jefferson, Josephine, Klamath, Lake, Lane, Linn, Malheur, Morrow, Sherman, Umatilla, Union, Wasco and Wheeler. A Governor's Drought Declaration allows the Water Resources Department to issue emergency drought permits to applicants, using an expedited process.

Oregon Basin Outlook Report

June 1, 2015

****Final Report for 2015****

Oregon Snowpack Lowest on Record 2015 Water Year

State-wide, Oregon's snowpack this winter peaked at the lowest levels measured in the last 35 years. The chart above puts this year's record low snowpack into historical context. The height of each bar reflects the peak snowpack—from across the state of Oregon—for each water year. This year, 2015, is shown in red at the far right. Many snow monitoring sites set records for the lowest peak snowpack and earliest melt-out date since measurements began. In western Oregon, the snowpack peaked 60-90% below the normal amounts and the snow melted up to 3 months early. The snowpack in the eastern part of the state was only slightly better, peaking 30-80% below normal levels and up to 2 months earlier than normal. Lack of normal mountain snowpack has led to well below normal streamflow forecasts for the state. Currently, most of Oregon is included in the severe to extreme drought category, according to the National Drought Monitor. Water shortages across Oregon are expected this summer and Governor Kate Brown has declared a drought state of emergency in 15 counties as a result.

DROUGHT

Current Basin Water Status

Basin #	Basin Name	Basin Status	Reason
1	North Coast	Drought Unavoidable	Record low flows
2	Willamette	Drought Unavoidable	Corps Reservoirs 50%
3	Sandy	Drought Unavoidable	Near record low streams
4	Hood	Drought Unavoidable	Very low streamflow
5	Deschutes	Drought Unavoidable	Very low tributary flows
6	John Day	Drought Unavoidable	Very low flows
7	Umatilla	Drought Unavoidable	Very low flows
8	Grande Ronde	Drought Unavoidable	Flows dropping rapidly
9	Powder	Drought Unavoidable	Very low tributary flows
10	Malheur	Drought Unavoidable	Reservoir storage is near empty
11	Owyhee	Drought Unavoidable	Reservoir storage is near empty
12	Malheur Lake	Drought Unavoidable	No reservoir storage; Very low flows
13	Goose & Summer Lake	Drought Unavoidable	Reservoir storage is near empty; low flows
14	Klamath	Drought Unavoidable	Low flows
15	Rogue	Drought Unavoidable	Low flows
16	Umpqua	Drought Unavoidable	Low flows
17	South Coast	Drought Unavoidable	Record low flows
18	Middle Coast	Drought Unavoidable	Record low flows

Definitions

Normal Water supply is not atypical.

Below Normal Water supply under what is needed to meet normal demands.

Drought Likely Water supply likely to fall well short of meeting normal demands.

Drought Unavoidable Water supply will fall well short of meeting normal demands.

OREGON SURFACE WATER SUPPLY INDEX (SWSI)

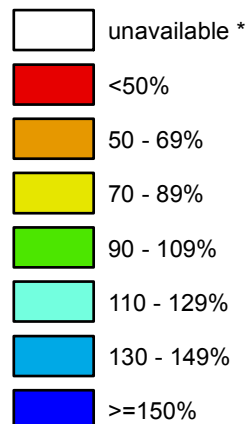

As of September 1, 2015

Oregon SNOTEL Water Year (Oct 1) to Date Precipitation % of Normal

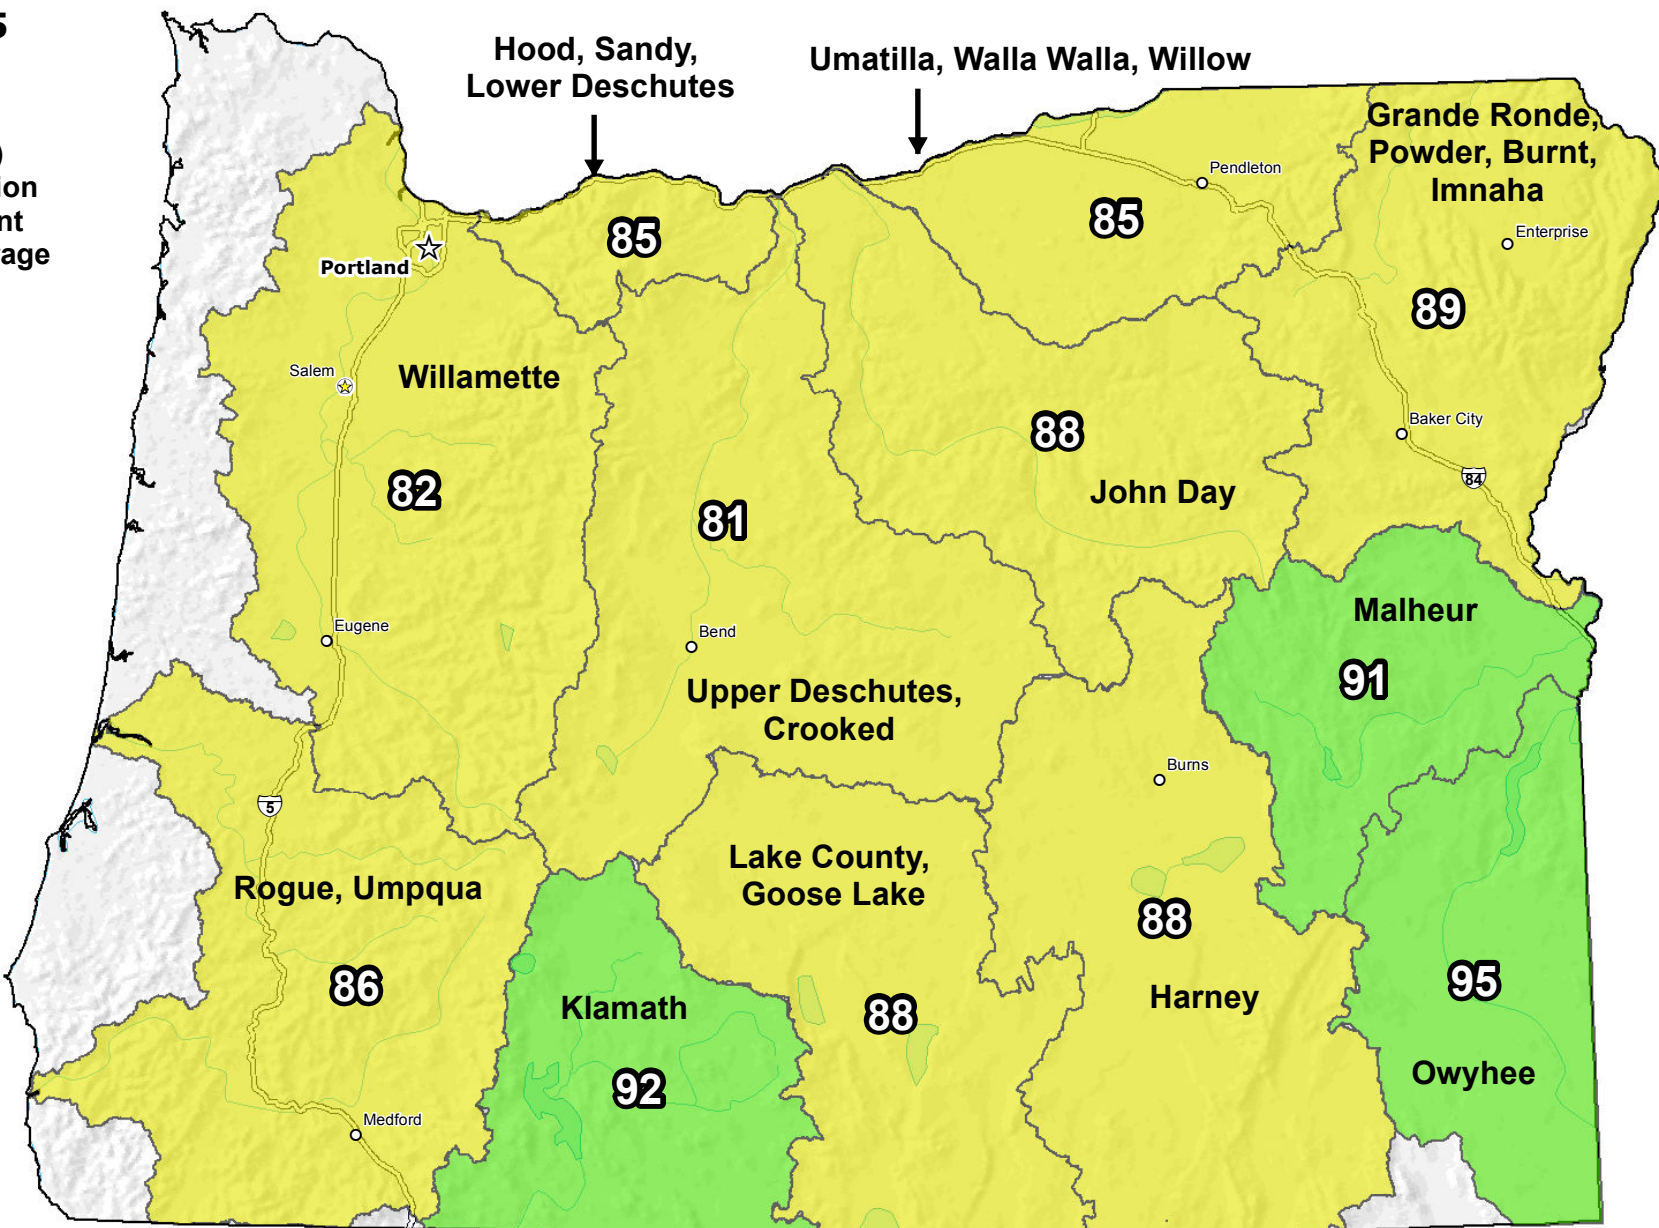

Sep 14, 2015

Water Year (Oct 1)
to Date Precipitation
Basin-wide Percent
of 1981-2010 Average

* Data unavailable at time
of posting or measurement
is not representative at this
time of year

**Provisional Data
Subject to Revision**

The water year to date precipitation percent of normal represents the accumulated precipitation found at selected SNOTEL sites in or near the basin compared to the average value for those sites on this day. Data based on the first reading of the day (typically 00:00).
