The right to the use of the water for the above purpose is restricted to beneficial use on the lands or place of use described.

The works constructed shall be in accordance with the General Standards for the Construction and Maintenance of Water Wells in Oregon, and shall include air lines and pressure gauges or access ports for measurement adequate to determine water level elevation in the well at all times. Subsequent maintenance of wells shall also be in accordance with the General Standards for the Construction and Maintenance of Water Wells in Oregon.

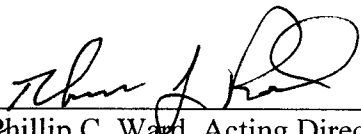

The user shall maintain measuring devices suitable to the Water Resources Department, and shall keep a complete record of the amount of groundwater withdrawn.

The use of water allowed herein may be made only at a time when sufficient water is available to satisfy all prior rights, including rights for maintaining instream flows. This use may be regulated if analysis of data available discloses that the appropriation will measurably reduce the surface water flows necessary to maintain the free-flowing character of a scenic waterway in quantities necessary for recreation, fish and wildlife in effect as of the priority date of this right or as those quantities may be subsequently reduced.

This certificate describes that portion of the water right confirmed by Certificate 79681, State Record of Water Right Certificates, NOT modified by the provisions of six orders of the Water Resources Director entered JUL 26 2004, approving Transfer Applications 9293, 9333, 9341, 9342, 9344, and 9404.

The issuance of this superseding certificate does not confirm the status of the water right in regard to the provisions of ORS 540.610 pertaining to forfeiture or abandonment.

WITNESS the signature of the Water Resources Director, affixed July 26, 2004.
