The right shall conform to such reasonable rotation system as may be ordered by the proper state officer.

The quantity of water diverted from the additional and new points of appropriation, together with that diverted at the old points of diversion, shall not exceed the quantity of water lawfully available at the original points of appropriation.

When required by the Department, the water user shall install and maintain an in-line flow meter or other suitable device(s) for measuring and recording the quantity of water diverted. The types and plans of the measuring device must be approved by the Department prior to beginning construction and shall be installed under the general supervision of the Department.

This certificate is issued to correct a scrivener's error in the Certificate recorded at page 87345, State of Water Right Certificates. Certificate 87345 was issued with an incorrect place of use description, identification of number of acres available for irrigation, and maximum rate allowed. This certificate supersedes Certificates 87326 and 87345, and describes that portion of earlier Certificate 85431 not cancelled by an order recorded as Special Order Volume 85, Page 721 or modified by the order recorded at Special Order Volume 85, Page 783, approving Transfer Application T-11201.

The issuance of this superseding certificate does not confirm the status of the water right in regard to the provisions of ORS 540.610 pertaining to forfeiture or abandonment.

The right to the use of the water for the above purpose is restricted to beneficial use on the lands or place of use described.

The use of water shall be limited when it interferes with any prior surface or ground water rights.

WITNESS the signature of the Water Resources Director, affixed July 2 2013.
