The amount of water used for irrigation, together with the amount secured under any other right existing for the same lands, shall be limited to a diversion of 0.0375 of one cubic foot per second, or its equivalent for each acre irrigated during the irrigation season of each year. The use shall conform to such reasonable rotation system as may be ordered by the proper state officer.

The quantity of water diverted at the new point of diversion (shallow well) shall not exceed the quantity of water lawfully available at the original point of diversion.

The well from which water is taken under the right shall be constructed and maintained so that the effect on the surface water source of the use of water from the well will be similar to the use of the original authorized point of diversion.

The use of water under this right shall be subject to regulation consistent with other water rights from the surface water source and to all other applicable conditions and restrictions that existed at the original point of diversion.

This is a final order in other than a contested case. This order is subject to judicial review under ORS 183.484. Any petition for judicial review must be filed within the 60-day time period specified by ORS 183.484(2). Pursuant to ORS 536.075 and OAR 137-004-0080, you may petition for judicial review or petition the Director for reconsideration of this order. A petition for reconsideration may be granted or denied by the Director, and if no action is taken within 60 days following the date the petition was filed, the petition shall be deemed denied.

If, within five years after approval of the transfer, the Department finds that the transfer results in substantial or undue interference with an existing ground water right due to use of the pump, that would not have occurred in the absence of the transfer, the new point of appropriation shall be subordinate to the existing right injured by the transfer.

The original point of diversion of surface water shall not be retained as an additional or supplemental point of diversion under the right. However, if within five years after approval of the transfer, the Department receives a transfer application to return to the last authorized surface water point of diversion, the application shall be approved.

When required by the Department, the water user shall install, maintain and operate an in-line flow meter or other suitable device for measuring and recording the quantity of water diverted. The type and plans of the measuring device must be approved by the Department prior to beginning construction and shall be installed under the general supervision of the Department.
