- A. The water user shall maintain the totalizing flow meters or other suitable measuring devices as approved by the Director in good working order at each point of diversion (new and existing).
- B. The water user shall allow the Watermaster access to the meters or measuring devices; provided however, where the meters or measuring devices are located within a private structure, the Watermaster shall request access upon reasonable notice.

The wells shall be maintained in accordance with the general standards for the construction and maintenance of water wells in Oregon.

The quantity of water diverted at the additional point of appropriation, together with that diverted at the original points of appropriation, shall not exceed the quantity of water lawfully available at the original points of appropriation.

The water user shall ensure that the wells have been assigned an OWRD Well Identification Number (Well ID tag), which shall be permanently attached to the well. The Well ID shall be used as a reference in any correspondence regarding the well(s), including any reports of water use, water level, or pump test data.

The water user shall maintain a record of all water used each month, including the total number of hours of pumping, the total quantity pumped, and the categories of beneficial use to which the water is applied. Each well shall have continuous casing and continuous seal from land surface, through the predominantly basin-fill unit, and 5 feet into the predominantly basalt unit at minimum. Note: the depth to the predominantly basalt unit varies with location.

Water shall be acquired from the same aquifer (water source) as the original points of appropriation.

The right to use water for the above purpose is restricted to beneficial use on the lands or place of use described.
