Part 5:

The diversion dam is a low gravel dam across Succor Creek. It feeds an earth ditch which reaches the Knox property after approximately 2 miles. This ditch also feeds other parcels of land under other ownership.

Upon entering the Knox property, water flows eastward in a concrete ditch along the South boundary of the property to a small ravine in the SW/SW quarter of section 6. This ravine is the central point of the present irrigation system. All the head ditches (earth and concrete) are fed from this channel.

Water from the Ridgeview Irrigation District flows onto the property from the South. It travels west through an earth ditch and is distributed through the same ravine as the Succor Cr. water.

Part 5A:

1. Measurements for the Earth Ditch were taken 200 ft. downstream of the concrete wasteway shown in Sec. 11, T23S, R46E.
2. Note that a concrete ditch carries Succor Cr. water onto the Knox property in the SW corner of Sec. 6, T23S, R47E.

Material: Concrete

Top Width: 3.3 ft. Bottom Width: 1.0 ft. Depth: 1.2 ft.

Grade: 0.0033 ft/ft. Capacity: 11.2 cfs
