6. The portion of the second right to be temporarily transferred is as follows:

**Certificate:** 61849 in the name of FAR WEST FARMS (perfected under Permit G-4504)

**Use:** SUPPLEMENTAL IRRIGATION of 905.4 ACRES

**Priority Date:** FEBRUARY 10, 1969

**Rate:** 1.60 CUBIC FEET PER SECOND, Provided that Well 3 shall not exceed the capacity of Well 2 and both wells shall not be pumped simultaneously, or its equivalent in case of rotation, measured at the well.

**Limit/Duty:** The amount of water used for irrigation, together with the amount secured under any other right existing for the same lands, shall be limited to ONE-EIGHTIETH of one cubic foot per second per acre, or its equivalent for each acre irrigated and shall be further limited to a diversion of not to exceed 3.0 acre-feet per acre for each acre irrigated during the irrigation season of each year. The right shall be limited to any deficiency in the available supply of any prior right for the same land and shall not exceed the limitation allowed herein.

9. The portion of the third right to be temporarily transferred is as follows:

**Certificate:** 68536 in the name of BOARDMAN FARMS INC. (perfected under Permit S-43877)

**Use:** PRIMARY IRRIGATION OF 266.3 ACRES AND SUPPLEMENTAL IRRIGATION OF 612.9 ACRES

**Priority Date:** FEBRUARY 15, 1979

**Rate:** 3.16 CUBIC FEET PER SECOND (CFS) FOR PRIMARY IRRIGATION AND 5.81 CFS FOR SUPPLEMENTAL IRRIGATION

**Limit/Duty:** The amount of water used for irrigation together with the amount secured under any other right existing for the same lands, is limited to a diversion of ONE-FORTIETH of one cubic foot per second (or its equivalent) and 4.5 acre-feet for each acre irrigated during the irrigation season of each year, provided further that the right allowed herein shall be limited to any deficiency in the available supply of any prior right existing for the same land and shall not exceed the limitation allowed herein.

**Source:** COLUMBIA RIVER, a tributary of THE PACIFIC OCEAN

**Authorized Point of Diversion:**

10. Temporary Transfer Application T-12316 proposes to temporarily change the place of use of the right to a combination of center pivot irrigated circles and drip irrigated strips seven feet wide alternating with un-irrigated strips three feet wide within a larger land parcel. The acreage below represents the proposed irrigated area with the drip irrigated strips indicated with an (\*):

11. Temporary Transfer Application T-12316 proposes to temporarily transfer water rights within the boundaries of Columbia Improvement District. The district was notified of the proposed temporary transfer and indicated that the district did not object to the transfer therefore providing a Supplemental Form D for the application.
12. Finley Buttes Landfill Co., PO Box 61726, Vancouver, WA, 98666 owns the lands located in Section 6, Township 2 North, Range 26 East, in the Willamette Meridian, which is proposed to receive irrigation on four pivot circles.

***Temporary Transfer Review Criteria***

13. Water has been used within the last five years according to the terms and conditions of the rights. There is no evidence available that would demonstrate that the rights are subject to forfeiture under ORS 540.610.
14. A pump, pipeline, and sprinkler system sufficient to use the full amount of water allowed under the existing rights are present.
15. Due to the complexity of the layout of the fields to be drip irrigated with 8 foot and 2 foot strips, the proposed change in place of use could result in enlargement of the rights if the application of water extends beyond the proposed place of use. Absent soil moisture monitoring, it would be impossible to determine whether enlargement was occurring.
16. Adherence to the water flow measurement and soil moisture monitoring conditions listed below would provide the tools necessary to determine that enlargement is not occurring.
17. The proposed change in place of use to center pivot irrigated circles would not result in enlargement of the rights. Any use of water outside of the proposed pivots could be readily observed by the Watermaster, thus the need and use of soil moisture monitoring conditions described in the certificates will not be needed to monitor the temporary place of use on the center pivots for enlargement of the rights.
18. The proposed changes, as conditioned, would not result in enlargement of the rights.
19. The proposed changes, as conditioned, would not result in injury to other water rights. This finding is made through an abbreviated review recognizing that the transfer may be revoked under ORS 540.523(5) if the Department later finds that the transfer is causing injury to any existing water right.

**Conclusions of Law**

The temporary change in place of use proposed in Temporary Transfer Application T-12316 is consistent with the requirements of ORS 540.523 and OAR 690-380-8000.

**Now, therefore, it is ORDERED:**

1. The temporary change in place of use proposed in Temporary Transfer Application T-12316 is approved.
2. The water user shall install and maintain a water flow monitoring system.
  - a) The water user shall install and maintain valves and in-line flow meters or other suitable devices for controlling, measuring and recording the quantity of water diverted. In-line flow meters shall be installed at each well and each field control manifold serving the drip irrigated areas. The type and plans of the valves and measuring devices must be approved by the Department prior to beginning construction and shall be installed under the general supervision of the Department.
  - b) The water user shall operate and maintain the valves and measuring devices, as needed. The Watermaster may monitor the system and accuracy of the measuring devices, as needed.
  - c) Flow meter readings shall be collected at a minimum of weekly intervals until one week past the end of the irrigation season. Flow meter data collected from the monitoring system shall be reported to the Watermaster within 3 days of the data collection date, as approved by the Watermaster.
3. The water user may be required to install and maintain a soil moisture monitoring system.
  - a) If required, the monitoring system shall include Gro-Point Sensors or a similar monitoring system capable of accuracy that is equivalent to or superior to the level of accuracy provided by the Gro-Point system. The type of system and installation plans must be approved by the Watermaster prior to installation.
  - b) If required, the soil moisture monitoring system may include up to ten paired sites and three control sites located adjacent to the planted area, such that the control sites share similar soil type, aspect and light conditions as the monitoring sites in the planted area. Each paired site shall consist of a pair of access tubes located within the dry non-irrigated strip between irrigated strips. Each access tube should be placed so that the outer edge of the probe's zone of influence will be within 2 inches of the edge of the irrigated strip. Additional soil moisture monitoring stations shall be installed as required by the Watermaster where conditions dictate more monitoring stations are required to effectively determine irrigation is occurring only where there is an appurtenant water right. The monitoring program, including both the number and location of the monitoring sites, shall be approved by the Watermaster prior to installation.
  - c) If required, soil moisture content shall be monitored continuously or collected at a minimum of weekly intervals until one week past the end of the irrigation season. Soil moisture data collected from the monitoring system shall be reported to the Watermaster in summary format including equipment used and monitoring data listed by station and measurement field, as approved by the Watermaster.

- d) Soil moisture reports shall be made during the first week prior to the irrigation season and once per week during the first three weeks of the irrigation season. Unless otherwise required by the Watermaster, soil moisture data collected shall be reported to the Watermaster within 3 days of the data collection date. Reporting requirements may be modified, as dictated by the Watermaster or upon written request from the water user subject to approval of the Watermaster. However, review of the monitoring program can occur at any time with a formal request from the water user or the Watermaster. Modification to the monitoring program may occur at any time as deemed necessary and/or appropriate by the Watermaster.
  - e) Upon reasonable notice, the water user shall provide the Watermaster access to metering equipment and moisture monitoring stations as well as access to monitoring data and flow data, including access to real time data on an internal web site or computer.
  - f) The water user shall promptly inform the Watermaster of any situation that result in the application of water to any land without a water right, including but not limited to the areas between crop rows. The water user shall also inform the Watermaster of the course of action taken by the water user to correct the problem and prevent the future occurrence of similar events.
  - g) If water is applied to lands without water rights, including but not limited to, the area between the crop rows, the Watermaster may regulate the water use until the soil moisture and flow data demonstrate that the areas without water rights are no longer receiving water.
  - h) If, at any time the Watermaster determines that the water user has not taken all necessary precautions to ensure that areas without appurtenant water rights, including areas between crop rows, are not receiving water this temporary transfer may be terminated. If this transfer is terminated, the water rights subject to this transfer will revert to their original place of use.
4. The former place of use **shall not** be irrigated as part of these water rights during the 2016 irrigation season.
  5. The use shall revert to the authorized place of use at the end of the 2016 irrigation season.
  6. The approval of this temporary transfer may be revoked or modified if the Department finds the changes cause injury to any existing water right.
  7. A subsequent application for permanent transfer of Certificates 61848, 61849 and 68536 shall be subject to a full and complete review to determine consistency with the requirements of OAR Chapter 690, Division 380. Approval of this temporary transfer does not establish a precedent for approval of a subsequent application filed for a permanent transfer.
