Measurement, recording and reporting conditions:

- A. Before water use may begin under this permit, the permittee shall install a meter or other suitable measuring device as approved by the Director. The permittee shall maintain the meter or measuring device in good working order, shall keep a complete record of the amount of water used each month and shall submit a report which includes the recorded water use measurements to the Department annually or more frequently as may be required by the Director. Further, the Director may require the permittee to report general water use information, including the place and nature of use of water under the permit.
- B. The permittee shall allow the watermaster access to the meter or measuring device; provided however, where the meter or measuring device is located within a private structure, the watermaster shall request access upon reasonable notice.

The permittee shall install, maintain, and operate fish screening and by-pass devices as required by the Oregon Department of Fish and Wildlife to prevent fish from entering the proposed diversion. The required screens and by-pass devices are to be in place, functional and approved by an ODFW representative prior to diversion of any water.

The permittee shall not construct, operate or maintain any dam or artificial obstruction to fish passage in the channel of the subject stream unless a fishway is provided. The applicant is hereby directed to contact an ODFW Fish Passage Program coordinator, Portland, Oregon, before beginning construction of any in-channel obstruction.

The outlet gate shall be cycled at least once each year and shall be fully operational at all times.

Routine maintenance of the dam, spillway and appurtenant structures shall be performed as necessary to control weeds and brush, repair slumps and areas of erosion, and/or replace defective equipment.

No water shall be stored until this department receives written certification from the engineer of record that construction was performed under the supervision of a professional engineer licensed in Oregon, and has been completed in accordance with the approved plans and specifications. If construction deviates from the approved design, a set of as built drawings must accompany the engineer's written certification of completion.

The earthen dam and resultant reservoir shall be constructed, operated, and maintained according to the approved plans and specifications dated December 23, 1992, on file with the Water Resources Dam Safety Program.
