

STATE OF OREGON

COUNTY OF JACKSON

PERMIT TO APPROPRIATE THE PUBLIC WATERS

THIS PERMIT IS HEREBY ISSUED TO

SUNRISE PARKWAY LLC
PO BOX 1269
SHADY COVE OR 97539

The specific limits and conditions of the use are listed below.

APPLICATION FILE NUMBER: R-88479

SOURCE OF WATER: RUNOFF, TRIBUTARY TO LITTLE BUTTE CREEK.

STORAGE FACILITY: SUNRISE POND

PURPOSE OR USE OF THE STORED WATER: AGRICULTURAL USE

MAXIMUM VOLUME: 300.0 ACRE-FEET

WATER MAY BE APPROPRIATED FOR STORAGE DURING THE PERIOD: DECEMBER 1 THROUGH APRIL 30

DATE OF PRIORITY: NOVEMBER 30, 2017

THE RESERVOIR IS ENTIRELY BELOW GROUND SURFACE; THERE IS NO DAM

RESERVOIR LOCATION:

Name	Twp	Rng	Mer	Sec	Q-Q	Measured Distances
SUNRISE POND	35 S	1 W	WM	28	SE-SE	945 FEET NORTH AND 690 FEET WEST FROM SE CORNER, SECTION 28

1. Measurement Devices and Recording/Reporting of Annual Water Storage Conditions:

- A. Before water use may begin under this permit, a staff gage that measures the entire range and stage between full reservoir level and dead-pool storage shall be installed in the reservoir. If no dead-pool, the gage must measure the full depth of the reservoir. The permittee shall maintain the device in good working order.
- B. The permittee shall allow the watermaster access to the device; provided however, where any device is located within a private structure, the watermaster shall request access upon reasonable notice.
- C. The permittee shall keep a complete record of the volume of water stored each month, and shall submit a report which includes water-storage measurements to the Department annually (or more

frequently as may be required by the Director). Further, the Director may require the permittee to report general water-use information, including the place and nature of use of water under the permit.

- D. The Director may provide an opportunity for the permittee to submit alternative measuring and reporting procedures for review and approval.
2. The permittee may be required in the future to install, maintain, and operate fish screening and bypass devices to prevent fish from entering the proposed diversion and to provide adequate upstream and downstream passage for fish.
3. The storage of water allowed herein is subject to the installation and maintenance of an outlet pipe (with a minimum diameter of 8" for any in-channel reservoir). This requirement may be waived if the Department determines other means have been provided to evacuate water when necessary.
4. The permittee shall pass all live flow outside the storage season described above.
5. The Director may require the user to measure inflow and outflow, above and below the reservoir respectively, to ensure that live flow is not impeded outside the storage season. Measurement devices and their implementation must be acceptable to the Director, and the Director may require that data be recorded on a specified periodic basis and reported to the Department annually or more frequently.
6. The permittee shall not construct, operate or maintain any dam or artificial obstruction to fish passage in the channel of the subject stream without providing a fishway to ensure adequate upstream and downstream passage for fish, unless the permittee has requested and been granted a fish passage waiver by the Oregon Fish and Wildlife Commission. The permittee is hereby directed to contact an Oregon Department of Fish and Wildlife Fish Passage Coordinator, before beginning construction of any in-channel obstruction.
7. This permit allows an annual appropriation (not to exceed the specified volume). This permit does not provide for the appropriation of water for out-of-reservoir uses, the maintenance of the water level or maintaining a suitable freshwater condition. If any water is to be used for out-of-reservoir purposes, a secondary water right is required. If any additional live flow is to be appropriated to maintain either the water level or a suitable freshwater condition, an additional water right is required.

Water Quality Conditions:

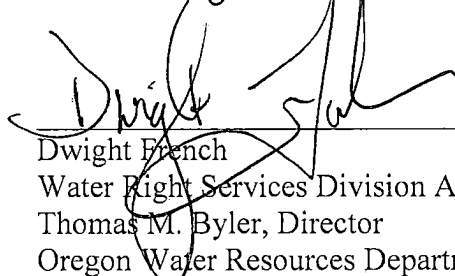

8. The use may be restricted if the quality of the source stream or downstream waters decrease to the point that those waters no longer meet existing state or federal water quality standards due to reduced flows.
9. The permittee shall not cause pollution of any waters of the state, or place or cause to be placed any wastes in a location where such wastes are likely to escape or be carried into the waters of the state by any means, per ORS 468B.025(1). If the Department of Environmental Quality (DEQ) determines that pollution of waters of the state is occurring, the permittee is not in compliance with ORS 468B.025(1), and DEQ shall notify the Department of the violation.

10. The permittee shall not release polluted off-channel stored water into waters of the state, unless under emergency situations. For routine maintenance, the permittee shall land apply stored water or provide treatment. The permittee shall comply with OAR 340-041 and ensure that water-quality standards are not violated by releases from storage.
11. The permittee shall comply with basin-specific Agricultural Water Quality Management Area Rules in OAR 603.095. Livestock management and cropping must protect riparian areas on the property, allowing site capable vegetation along streams to establish and grow to provide the following functions; shade (on perennial and some intermittent streams), bank stability, and infiltration or filtration of overland runoff.

STANDARD CONDITIONS

1. Failure to comply with any of the provisions of this permit may result in action including, but not limited to, restrictions on the use, civil penalties, or cancellation of the permit.
2. This permit is for the beneficial use of water without waste. The water user is advised that new regulations may require the use of best practical technologies or conservation practices to achieve this end.
3. By law, the land use associated with this water use must be in compliance with statewide land-use goals and any local acknowledged land-use plan.
4. The use of water allowed herein may be made only at times when sufficient water is available to satisfy all prior rights, including prior rights for maintaining instream flows.
5. Construction of the water system shall begin within five years of the date of permit issuance. The deadline to begin construction may not be extended. This permit is subject to cancellation proceedings if the begin construction deadline is missed.
6. The permitted volume of water shall be stored within ten years of the date of permit issuance. If additional time is needed, the permittee may submit an application for extension of time, which may be approved based upon the merit of the application.
7. Within one year after storage of water, the permittee shall submit a claim of beneficial use, which includes a map and report, prepared by a Certified Water Rights Examiner.

Issued May 21st, 2019

Dwight French
Water Right Services Division Administrator, for
Thomas M. Byler, Director
Oregon Water Resources Department
