Remarks: This reservoir is for recreation; flood water only will be impounded and stream flow will be controlled with drawoff valve at dam. This stream was gauged Sept 17, 1965, at proposed dam site with a flow then of .0076 s.f. The existing low summer flow in this river and the low water in wells below proposed dam have been critical. Control of this river flow at dam will relieve seasonal flow problems and will raise the existing low water table in the wells, reducing at the same time an uneasy winter and spring high water situation in valleys below this project.
