Remarks: At the present time, it is difficult to give a very accurate description of the water system to be developed. However, generally speaking, it will consist of a catch basin at the point of diversion holding at least 500 gals. of water from which a centrifugal electric driven pump of at least 50 gals. per minute will raise the water up 80 feet to a 1000 gal. capacity storage tank. From the storage tank a 3 inch main will run along the present county road to the north boundary of the property.

The land facing the county road has been sub-divided into lots which will accommodate at least 22 housing units. The amount of water requested is based on the amount to provided water for 22 families.
