Remarks: 2. Data on map incorrectly shows 350 GPM.

13. Equipment shown on the accompanying map, i.e. pump, 950' -6" aluminum main pipe, two 880' -4" aluminum laterals and 44 sprinklers have already been installed. Future extension of 6" aluminum main pipe to the NW of the 1" iron pipe monument shown on the map is contemplated. The pipe is not currently available for such extension and it is impossible to say at what time it will be available. It is requested that in issuing the permit you allow as much time for completion of this extension as possible.

14. Pumping equipment is already installed as set out above to the full capacity of 440 GPM. The contemplated extension of the aluminum main as described under 13 above will not result in a larger gallons per minute appropriation of water, but will mean that it will be distributed over a greater acreage. For the same reasons which I requested above a maximum completion date on construction work, I also ask a maximum extension of time for completely applying the appropriated water to the full acreage described on the map.
