T. H. Lipscomb,  
Colonel, Corps of Engineers,  
District Engineer.

Remarks: The diversion is to be from the existing reservoir of the Eugene Water and Electric Board; this reservoir is formed by the Leaburg Diversion Dam. The flow of water will be controlled by two 42-inch slide gates located at the intake. The water will then flow 195 feet through two 24-inch diameter pipes to a supply canal leading to the hatchery facilities. The water will flow through the rearing ponds, hatchery buildings, etc.; then collect in drainageways which flow into the McKenzie River within a distance of approximately 1,200 feet downstream from the Leaburg Diversion Dam.

The Oregon State Game Commission has an application on file for the use of 10 c.f.s. of water to be used in conjunction with the water being applied for, thus a total of 100 c.f.s. is to be utilized in the hatchery facilities at this location.
