Remarks: Sprinkler tests show output of 70 gal per min from well, and 21 gal per min from seepage. This test made in July, 1952. At this time both Currie Creek and unnamed creek are dry and cannot contribute to supply.

It is the intention of the applicant to use waters from the unnamed creek and Currie Creek only to fill the reservoirs during winter and spring runoff periods.

It is understood that permit cannot be issued for the well, and the well is mentioned in this application only to show the main source of the water to be impounded.
