Remarks: This water system has been in use for domestic use and for watering stock for 30 years and the pond for early storage water since 1953. It is from a small creek that starts on U.S. land and runs thru the place. In the early spring the run-off is plenty to fill pond. This subs out to the upper part of field for early irrigation. In summer the creek supplied enough water for house- garden-stock etc. The lower end of creek normally goes dry so does not run-off the place in summer. Water is piped to water troughs for stock, they also use creek in winter when there is water in it they do not have direct access to pond.
