and to the Shattuck Ditch. No objection had or has been made to such use and the applicants herein assumed that there was a complete water right to all the lands that they were purchasing. Upon receipt of the abstract to the property the applicants by an inspection thereof learned that a recorded water right had been established to only eighty acres (for 40 acres in the southeast quarter of the northwest quarter and 40 acres in the northeast quarter of the southwest quarter of Section six (6) in Township Thirtythree (35), south of Range seven and one-half (71), East of the Willamette Meridian, in Klamath County, Oregon,). Learning that no water right certificate had ever been issued for the lands herein applied for, the applicants

immediately took steps to file therefor.

They are informed that there is ample and full water supply to allow them the water herein applied for. In this connection, attention is called to stipulation, agreement and the decree based thereon in the Adjudisation of Anna Creek and Wood River wherein and whereby it was stipulated and agreed and so decreed that in the event that the waterusers from the Melhase Ditch should transfer their use from the Shattuck Ditch from Anna Creek to Wood River that their water as therein adjudicated to them should revert to and be turned back to the users under the Shattuck Ditch in proportion as to the water that they should be able to take from Wood River; applicants are informed and believe and therefore state that the said users under the Melhase ditch have since constructed or had constructed a ditch direct to Wood River and that they are now and have been for a long time taking water therefrom instead of Anna Creek and that as a consequence there is ample water in Anna Creek to supply the needs of the applicants for water as herein applied for. The allowance of water to the applicants herein as requested will in no way injure or harm any one and will prove highly beneficial to the public in putting such water to a useful purpose, whereas, if the right is denied it can only result in loss of crops and can in no way add to the benefit of another as the water would only go to waste and flow on down Anna Creek into Wood River and thence into the Pacific Ocean as there is adequate water supply at all points below said diversion point to supply the demands of prior users. **2631**9
