Remarks: The source of this water is a line of springs on the upper part of land of said Dixon, as shown in drawing, including all water taken up by said drains along their course. The outflow of water is gathered up, passing thru 2 lines of drain tile and then brought together into a pipe from which water is conducted to his house for domestic uses, also over the land for irrigation. It is estimated that there is sufficient water to fill an 8" pipe, but there has been no stream flowing from said springs, the water having disappeared in the land below the springs. By collecting and distributing it as indicated, it can be made of greater service at but nominal expense and no one injured thereby.
