Remarks: Water from spring # 2 flows through a pipe to spring #1 after domestic needs are met.

The ponds are used to collect the water to pump it. Pond #1 is 50 feet by 25 feet by 3 feet deep. Pond #2 is 25 feet by 25 feet by 3 feet deep.

There is a pipe leading from spring No. 2 to pond No. 2. Pond No. 2 then has a pipeline from it to pond No. 1. There is a collection box over spring No. 2. The diversion is at the spring and not in the spring's natural drainage.

Spring No. 1 arises up from the ground at the very edge of pond No. 1. Thus, the diversion is at the spring.
