DESCRIPTION OF WORKS

Include dimensions and type of construction of diversion dam and headgate, length and dimensions of supply ditch or pipeline, size and type of pump and motor, type of irrigation system to adequately describe the proposed distribution system.

The water for the system is diverted into a pipe line at the origin or spring.

The diversion consists of a small concrete reservoir, 6 feet high, 50 feet wide and 70 feet long. The Main pipe line running from the diversion was replaced in 1948.

The length and sizes of the pipe are as follows and is shown on the maps:

222 feet of 4 inch cast iron, 402 feet of 6 inch cast iron, 7115 feet of $2\frac{1}{2}$ inch steel, 1801 feet 6 inch steel, 740 feet 8 inch steel, 950 feet 4 inch cement-asbestos, 4875 feet 8 inch cement asbestos, 3500 feet 10 inch cement asbestos, 225 feet 12 inch cement asbestos, 500 feet $1\frac{1}{2}$ inch plastic and 560 feet of 2 inch plastic. The only new construction work necessary to serve the area would be the addition of a line from a point near the diversion to the Northwest to serve that area. Any other work would be the replacement of small lines within the community now served.

It is estimated that the expected 25% increase in population during the next 10 years would require no additonal construction other than that listed.

If for domestic use state number of families to be supplied 165 Now & 210 in 1985 ^{12M01Q} 3/4/18

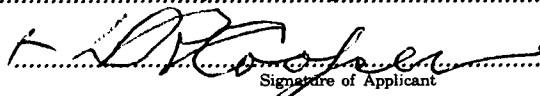

7. Construction work will begin on or before Completed ^{12M01Q} Oct 1 1979 3/4/18
8. Construction work will be completed on or before Oct 1 1979
9. The water will be completely applied to the proposed use on or before At Present Oct 1 1980
