DESCRIPTION OF WORKS

Include dimensions and type of construction of diversion dam and headgate, length and dimensions of supply ditch or pipeline, size and type of pump and motor, type of irrigation system to adequately describe the proposed distribution system.

Pod # 1 is non-submersible pump adjacent to creek. Pump is 1 horsepower electric 220 2mp, pulls water from steel barrel buried next to creek and pushes water up to gardens and pasture through plastic pipe and is dispersed by 3 stationary and 2 portable Reel-End Sprinklers. Water is used for irrigation only.
Pod # 2 is 1/2 horsepower pump (non submersible) also 220 2mp, pulls water from well, which is between well pump house and creek, and forces or pushes water up to house end yard through plastic pipe, and it is used for household uses and irrigation.

If for domestic use state number of families to be supplied One

7. Construction work will begin on or before Complete
" " "
8. Construction work will be completed on or before
9. The water will be completely applied to the proposed use on or before In Use

Application No. 59202

Permit No. 44497

Remarks: Note: Infiltration well consists of 4 - 30 inch diameter
high 24.5 to inch diameter tiles (concrete) stacked
on top of each other. Base of well is sand and
gravel which the water infiltrates through. Well
has a steel & concrete cover. Water probably
infiltrates through sand from the creek into the
well. The tiles are about 14 feet from the creek
and it is my opinion the creek water is filtered into
the well.
