DESCRIPTION OF WORKS

Include dimensions and type of construction of diversion dam and headgate, length and dimensions of supply ditch or pipeline, size and type of pump and motor, type of irrigation system to adequately describe the proposed distribution system.

There is a ditch that runs the full length of the property from the southern end to the northern end of the property. This ditch picks up all the water used.

We have three pumps, a 60 HP on the southern part of the property, a 75 HP on the central area and a 50 HP on the northern portion.

The 60 HP supplies four wheel lines and three hand lines, one $\frac{1}{4}$ mile wheel line, and three of approximately 20 heads. The three hand lines are approximately 20 heads. Most of the fields are irregular in shape and the number of heads running in each will vary depending on the location in the various fields. The main lines are 4 and 6 inch PVC.

The 75 HP presently supplies one wheel line over a $\frac{1}{4}$ mile long and a hand line of over 50 heads and one hand line of approximately 30 heads. The main line is 8-inch steel under the river and 4 and 6 inch PVC. We plan to add a small circle as soon as we can.

The 50 HP supplies 2 wheel lines approximately $\frac{1}{4}$ mile each plus 4 hand lines from 15 to 30 heads. The main line again is 4 and 6 inch PVC.

In the future we plan to tie all three systems together with 6 inch PVC.

If for domestic use state number of families to be supplied

7. Construction work will begin on or before *June 1, 1980*

8. Construction work will be completed on or before *Oct 1, 1981*

9. The water will be completely applied to the proposed use on or before *Oct 1, 1982*
