Remarks: The drainage system has been constructed consisting of a main canal and numerous laterals, both open and tile. It is now proposed to construct dams in this drainage canal and the laterals so as to control the water level during the low water season, thus providing irrigation by subbing. The drainage system already constructed together with such laterals as may be added from time to time, and the dams herein provided for will constitute the irrigation system. Pumps for lifting the water from the canals may be installed from time to time to supplement the subirrigation.
