Remarks: The water to be appropriated is reclaimed by placing a dam in the waste channel shown on the accompanying map. This dam prevents the seepage of approximately 1.0 sec. ft. of water from the Creek which seepage is usually lost to the other appropriators of water from this stream. The actual diversion from Squaw Creek is approximately 1/2 mile upstream from the waste channel and at this upper diversion it is proposed to take the same quantity of water as that which is prevented from leakage from the channel of Squaw Creek and so made available for the use of other appropriators below.
