IRRIGATED
AREAS = 

MARSH: 703/Parcel 2 1991-48

Note: We irrigate with a fully-automated, timed irrigation system designed with 17 zones. From mid-June through mid-September we irrigate thrice weekly, 30 minutes per zone. In addition, our flower-plant beds are heavily mulched to conserve water. The only lawn that we irrigate is either within the walled garden, or, directly in front of the house. Otherwise, we let the vast expanses of lawn on the east and west side of the house go dry during the summer months. In short, our irrigation system is not, typically, functioning eight months a year.
