Additional remarks: **The land described as "48% of land irrigated" is irrigated with micro sprinklers, with a strip ofland that does not receive irrigation. The land described as "19% of land irrigated" is irrigated with drip system, with a larger strip that does not get irrigated. The land described as "100% of land irrigated" is traditionally irrigated with full coverage.**

The "48% of land irrigated" area is Cherry, Apple, Apricot, Pear, Nectarine, Peach and Plum tree blocks. These trees are planted 8' apart in rows spaced 15' apart. Microspinklers are placed in each tree row at 8' intervals. The strip that is watered is 7' wide (3 1/2' on each side of the tree row).

The "19% of land irrigated" area is Berries, Grapes and Kiwi. The berries are planted 3' apart in rows spaced 10' apart. The grapes are planted 6' apart in rows spaced 12' apart. The kiwi is planted 12' apart in rows spaced 12' apart. The drip emitters run down each of the rows and irrigated a strip 2' wide (1' on each side of the row)

There is some allocation data attached to this application that breaks down each block and a map that shows the layout of the area not part of the 100% irrigated.
