Part 2 of 4 - Transfer Application Map Checklist

Your transfer application will be returned if any of the map requirements listed below are not met. Please be sure that the transfer application map you submit includes all the required items and matches the existing water right map. Check all boxes that apply. N/A Certified Water Right Examiner (CWRE) Stamp and Original Signature. For a list of CWREs, see http://www1.wrd.state.or.us/pdfs/cwre listing.pdf. CWRE stamp and signature are not required for temporary changes and substitutions. N/A If more than three water rights are involved, separate maps are needed for each water right. \boxtimes Permanent quality printed with dark ink on white or clear paper or film. The size of the map can be $8\frac{1}{2} \times 11$ inches, $8\frac{1}{2} \times 14$ inches, or up to 30 x 30 inches. For 30 x 30 inch maps, three (3) paper copies and an electronic copy in a .pdf, .tiff or **REGENED** \boxtimes are required. JAN 1 3 2011 \boxtimes A north arrow, a legend, and scale. WATER RESOURCES DEPT \boxtimes The scale of the map must be: 1 inch = 400 feet, 1 inch = 1,320 feet, the scale of the PENAIOREGON Proof/Claim of Beneficial Use Map (the map used when the permit was certificated), the scale of the county assessor map if the scale is not smaller than 1 inch = 1,320 feet, or a scale that has been pre-approved by the Department. \boxtimes Township, Range, Section, 1/4 1/4, DLC, Government Lot, and other recognized public land survey lines. \boxtimes Tax lot boundaries (property lines) are required. Tax lot numbers are recommended. \boxtimes Major physical features including rivers and creeks showing direction of flow, lakes and reservoirs, roads, and railroads. \boxtimes Major water delivery system features from the point(s) of diversion/appropriation such as main pipelines, canals, and ditches. \boxtimes Existing place of use that includes separate hachuring for each water right, priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions. If less than the entirety of the water right is being changed, a separate hachuring is needed for lands left unchanged. \boxtimes Proposed place of use that includes separate hachuring for each water right, priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions. \times Existing point(s) of diversion or well(s) with distance and bearing or coordinates from a recognized survey corner. This information can be found in your water right certificate or permit. \boxtimes If you are proposing a change in point(s) of diversion or well(s), show the proposed location and label it clearly with distance and bearing or coordinates. If GPS coordinates are used, latitude-longitude coordinates may be expressed as either degrees-minutes-seconds with at 11185 least one digit after the decimal (example – 42°32'15.5") or degrees-decimal with five or more digits after the decimal (example -42.53764°).

CERTIFICATE # 27304

Description of Water Delivery System

System capacity: 2.2 cubic feet per second (cfs) OR

1000 gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. Water is appropriated from Well #1 by a 125hp turbine motor. Water is conveyed northward from the well through ±200' of 10" steel pipe which reduces to $\pm 1900'$ of 8"steel pipe, then reduces to $\pm 1600'$ of 6"steel line to a 50hp booster pump. From the booster pump water is conveyed northward through ±1500' of 8" steel pipe before reducucing to ±1300' of 6" steel pipe to the point of terminus. Sprinkler heads vary and are changed to match the crops which are rotated. When 2.5 gpm heads are used, approximately 395 sprinkler heads are used to apply water to the Certificated grounds.
