CERTIFICATE # 86190

Description of Water Delivery System	em
---	----

System capacity: 4.0 cubic feet per second (cfs) **OR**_____ gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. Water is pumped from two wells and conveyed by underground conduit to two center pivots, which irrigate the place of use.

In your own words tell us what change(s) you want made and the reason for the change(s): We propose to move the existing place of use under Pivot 1 and part of Pivot 2 to another site owned south of Paisley and within ten miles. An additional well existing at the new site will be added to supply Pivot 1 and a new partial center pivot. This change is being requested because water from the Red House Road site has undesirable levels of Boron which impacts harvest production.
