Descri	Description of Water Delivery System												
System capacity: 2.09 cubic feet per second (cfs) OR													
	gallons per minute (gpm)												
Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. Water is pumped from Well 1 and 2 by 100 and 40 Hp turbine pumps, respectively. The water is then conveyed through 8" and 6" buried PVC mainlines, as shown on the application map. From these mainlines, 3-inch hydrants are located every 20 feet for connection to 3-inch aluminum laterals equipped with impact sprinklers. The area is irrigated every other week rotating between crops covering the whole area within a week. Table 1. AND/OR

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For proposed wells not yet constructed or built, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Table 3. Construction of Point(s) of Appropriation

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table I and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.
