## Part 5 of 5 – Water Right Information

Please use a separate Part 5 for each water right being changed. See instructions on page 6, to copy and paste additional Part 5s, or to add additional rows to tables within the form.

### Description of Water Delivery System

System capacity: **Pump situated on the North side of Grande Ronde pts. 2 and 3 capacity is 2.68 cfs, pump situated on the South side of Grande Ronde pts 2 and 3 is 2.80 cfs**  
 cubic feet per second (cfs) OR  
 \_\_\_\_\_ gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. **There is a 75 hp General Electric motor attached to a Cornell centrifugal pump. The pump is attached to a 10" suction line and pushes the water up 15' in height through a 10" buried Steel main. The water pushes North through the 10" main about 300 feet where it turns West and flows 1320 feet to an above ground 8" main. The mains are equipped with risers that connect to 2-5" 1320' long wheel lines, which distribute the water. There is a 100 hp General Electric motor connected to a Cornell centrifugal pump. The pump is attached to a 10" steel suction that raises the water 15 feet into a buried 10" steel main. The main extends South about 800' then reduces to an 8" steel main, buried. The main continues South for 1320 feet and reduces to a 6" buried main. The mainlines have risers that attach to 4 - 5", each 1320' long wheel lines that disribute the water. It would appear to me that both Div pts 2 & 3 are authorized for the certificates .**

**For Place of Use Changes**

Are there other water right certificates, water use permits or ground water registrations associated with the “from” or the “to” lands?  Yes  No

If YES, list the certificate, water use permit, or ground water registration numbers: \_\_\_\_\_

Pursuant to ORS 540.525, any “layered” water use such as an irrigation right that is supplemental to a primary right proposed for temporary transfer can be included in the transfer or remain unused on the authorized place of use. If the primary water right does not revert soon enough to allow use of the supplemental right within five years, the supplemental right shall become subject to cancellation for nonuse under ORS 540-610.

**For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation if necessary to convey the water to the new temporary place of use:**

- Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated with the corresponding well(s) in Table 1 above and on the accompanying application map. (Tip: You may search for well logs on the Department’s web page at: [http://apps.wrd.state.or.us/apps/gw/well\\_log/Default.aspx](http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx))

**AND/OR**

- Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide “a best estimate” for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

**Table 3. Construction of Point(s) of Appropriation**

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.
