^{1.} Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs \div 100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac= 0.56 cfs).

^{2.} If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/40 or

^{3.} Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the stand be fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 2a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 2b would be 0 and Line 2 would then also become 0. Description of Water Delivery System

System capacity: 2.0 cfs cubic feet per second (cfs) OR

AUG 25 2015

____ gallons per minute (gpm)

WATER RESOURCES DEPT

Describe the current water delivery system or the system that was in place at some Mine Within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. The water is diverted from Well (MARI 17908) and conveyed south along a 4-inch buried mainline that discharges directly to the reservoir or directly to the mainline piping through an 8-inch buried mainline. Water is pumped from the reservoir through a series of 6-, 8-, and 10-inch buried mainlines throughout the place of use. Lateral lines of 1.5-inch or 2-inch buried pipes convey water from the mainlines to the sprinklers which consist of double and single nozzle, impact-type sprinklers.

For Place of Use Changes

Are there other water right certificates	, water use permits or ground	d water registrations associated
with the "from" or the "to" lands?	Yes No	•

If YES, list the certificate, water use permit, or ground water registration numbers: <u>Certificates</u> 89680, 82817, 82818, and 90684, and Permits S-53651 and S-54271

Pursuant to ORS 540.525, any "layered" water use such as an irrigation right that is supplemental to a primary right proposed for temporary transfer can be included in the transfer or remain unused on the authorized place of use. If the primary water right does not revert soon enough to allow use of the supplemental right within five years, the supplemental right shall become subject to cancellation for nonuse under ORS 540-610.

For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation if necessary to convey the water to the new temporary place of use:

\boxtimes	Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and
	associated with the corresponding well(s) in Table 1 above and on the accompanying
	application map. (Tip: You may search for well logs on the Department's web page at:
	http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx)

AND/OR

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells
that do not have a well log. For proposed wells not yet constructed or built, provide "a best
estimate" for each requested information element in the table. The Department recommends
you consult a licensed well driller, geologist, or certified water right examiner to assist with
assembling the information necessary to complete Table 3.

Table 3. Construction of Point(s) of Appropriation

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA).
