Describe the pre-project water delivery system. Include information on the diversion structure, pumps, and conveyance facilities (including canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use). *Provide sufficient detail for the Department to determine the system capacity*. Replacement of 2.1 miles of the North Green Point pipeline, currently 39 inch galvanized pipe which is starting to rust through and leak and some 36" ADS pipe with rock damage. The pipe has also been damaged by logging in the past and other storm damage. The upper end of the pipe to be replaced is approximately 2.69 miles downstream of the installed NMFS & ODFW approved fish screened North Green Point Creek Diversion. The existing pipeline consists of 24"& 27"PVC pipe and some 30"concrete pipe between the diversion and the upstream end of the replacement project. The downstream end of the pipe replacement project is approximately 4 miles upstream of the first irrigation water user on the system. There is currently 36" HDPE, 42" PVC, 42"ADS & 36"Durmax pipe between the lower end of the replacement project and the terminus of the pipeline.

Table 1: Pre-Project Description

List: A) the maximum rate and annual duty (volume) of water that may be diverted as stated on the water right of record; and B) the maximum amount of water that can be diverted using the pre-project facilities ("system capacity"). If there are multiple priority dates on the water right, list the rate and duty associated with each priority date. (If the water right is only limited by rate, do not list a duty, and conversely, if the water is only limited by duty, do not list a rate.)

Describe the type of conservation measures, cheaten resources DEPT SALEM, OREGON On-Farm efficiency project

Distribution project, such as a ditch piping or lining project

Other:

RECEIVED

SEP 2 0 2016

WATER RESOURCES DEPT SALEM, OREGON

Describe the proposed changes to the physical system, operations and application methods that will result in the conservation of water. If these proposed changes will change the point of diversion, you must meet the ODFW fish screen and bypass requirements pursuant to ORS 540.525. Please include a description and details of how the estimate of water conserved was determined. Please provide sufficient detail for the Department to provide notice of the project. The North Green Point pipe replacement project includes replacement of 2.1 miles of pipe, which currently is made up of 39" galvanized pipe and 36" ADS pipe. Flow measurements at the start of this section of pipe and at the end of this section of pipe indicate a loss of 1.5 cfs year round. The project is located in Hood River County, in the mountains, GPS coordinates are Lat: 45* 35' 54", Lon: 121* 38' 54", the legal description is 1N-9E-3-SE/SW. The North Green Point diversion has an installed NMFS and ODFW compliant fish screen with bypass. The 2.1 mile stretch of old pipe will be replaced with new 30" HDPE pipe.

Place of Use Involved in Conservation Measures

List only the part of the right that will be affected. If the entire right is being affected, just state "entire Certificate."

Part 4 of 4 – Mitigation, Proposed Use, Project Schedule, Funding, and Fee Calculation

WATER RESOURCES DEPT SALEM, OREGON

MITIGATION:

WATER RESOURCES DEPT SALEM, OREGON

Describe any expected effects from the proposed allocation of conserved water on other water rights. Describe what currently happens to the water that is proposed to be conserved. Certificates 74299, 85974 & 85975 will be adjusted. Water that will be conserved is currently leaking out in several places from the 39" & 36" pipe in the 2.1 mile stretch that encompasses the pipe replacement project.

Describe any mitigation or other measures that are planned to avoid harm to other water rights. None

PROPOSED USE:

N/A □ N/A	For new out-of-stream uses, describe the intended use and boundaries of the expected area within which the diversion structures and places of use of the applicants?
	which the diversion structures and places of use of the applicants' conserved water right will be located. This is land other than that to which this water right is appurtenant. Intended Use: We
	will likely leave the water in-stream for the foreseeable future. If we have a patron who needs
	additional water, then we may allow a temporary transfer (for instance if they have a new planting
	that will require a higher level of irrigation than usual). Boundaries: Any new out-of-stream uses
	will take place within the boundaries of our District. We would be utilizing the existing diversion
	and fish screen on our North Greenpoint Creek diversion. The areas within our District that would
	be included are: 2N-10E-04, 2N-10E08, 2N-10E-09, 2N-10E-10, 2N-10E-15, 2N-10E-16, 2N-
	10E-17, 2N-10E-19, 2N-10E-20.

For instream uses to be created:

k			September 30	OLUME	267.7 378.7
			June 3 to	pert	email IIII
74299	12-1-1905	North Green Point Creek	April 15 — October	1.125	378.7- 267.7
Originating Water Right (as identified in Part 3)	Priority Date	Source	Proposed Instream Period	Rate (cfs)*	Volume (ac-ft)**

Tip:To calculate rate (if other than the rate allowed by the right), divide the volume by the number of days in the period and then divide by 1.983471; or

To calculate volume, multiply the rate by the number of days in the instream period and then multiply by 1.983471.

Note: The instream rate may not exceed the maximum rate conserved and the total volume may not exceed to maximum volume or duty conserved (Table 3, Column C)

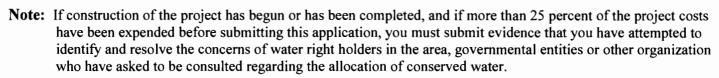

Location of the proposed instream water right.

\boxtimes	Water is requested to be protected within a reach. Location of the proposed reach (identify the
	extent of the reach): (e.g., from the upstream POD located at RM to downstream location at the mouth at
	RM) From North Green Point Diversion 1N-9E-3-SE/SW, GPS coordinates Lat: 45* 35'
	37" N, Lon: 121* 41' 2" W to the confluence with Green Point Creek located in NENW of Sec.
	10, T1N, R9E, WM. Further protected in Green Point Creek to the confluence with West Fork of
	Hood River located in the SENW of Sec. 12, T1N, R9E, WM.

Farmers Irrigation District Conserved Water Policy

WATER RESOURCES DEPT SALEM, OREGON

Adopted August 17, 2016

1. Authority

The Board of Directors (the "Board") of Farmers Irrigation District (the "District") must adopt a Conserved Water Policy (the "Policy") pursuant to Oregon Administrative Rule ("OAR") 690-018-0025 in order to allocate conserved water from conservation measures pursuant to Oregon Revised Statutes ("ORS") 537.455 to 537.500.

2. Conserved Water Policy

A portion of any water conserved pursuant to the Policy may be used on additional lands, be put to a different use, or be leased or sold to another user. The Policy is intended to promote the conservation of water, maximize beneficial use and enhance stream flows pursuant to the statutory authority in ORS 537.455 to 537.500 and 540.510(2) and (3).

3. Definition of Conserved Water

"Conserved Water" means that amount of water that results from conservation measures, defined as the difference between: (a) the smaller of the amount stated on the water right or the maximum amount of water that can be diverted using the existing facilities; and (b) the amount of water needed after implementation of conservation measures to meet the beneficial use under the water right certificate.

4. Allocation of Conserved Water

All water resulting from a water conservation measure may be transferred for use for: (a) irrigation of additional land (District's/applicant's land or land of others through transfer); (b) other beneficial uses under Oregon law; or (c) lease or permanent allocation to instream benefits. In particular, conserved water shall be allocated pursuant to the Policy in the following percentages: (a) 25% of the conserved water shall be allocated to the State of Oregon for instream purposes; and (b) 75% of the remaining water shall be allocated to the District/applicant in proportion to its financial contribution to the conservation measure. If there are public monies contributed to the conservation measure, the percent of instream water allocated for the public benefit, shall include the 25% instream allocation required under ORS 537.455 to 537.500. In no case shall the District/applicant receive less than 25% of the remaining conserved water unless the District/applicant voluntarily chooses to propose a higher allocation to the State for instream purposes. All transfers must conform to Oregon Water Resources Department ("OWRD") rules and regulations.

5. Share in Funding Water Conservation Project

When the District adopts a water conservation project providing for conserved water, notice of the project and its adoption shall be given to all District patrons. The notice to the patrons shall indicate the project's estimated cost per irrigated acre and allow the patrons thirty (30) days from the date the notice is placed in the mail, postage pre-paid, for first class mail, to elect to fund their prorata share of the project and receive their prorata share of conserved water less any state mandated instream percentage of the conserved water.

Notification to the District by the patron of the patron's election to fund their prorata share of the water conservation project, shall be in writing and shall include a check to cover the costs estimated for the District patron's prorata share of the project. If the project estimates are high then patron will upon completion of the project receive a refund. If the project estimate is low the patron will upon completion of the project pay the increased prorata costs.

6. Conserved Water Applications

An application must be submitted to OWRD to request allocation of conserved water, as required by OWRD's rules for the conserved water program. It must be accompanied by the appropriate fee and the applicant will be required to pay for costs of notice. There is a state public review process for such applications. Two types of applications are contemplated by this Policy:

- (a) District Applications. When the conserved water occurs within the conveyance system, prior to a District diversion or measurement point at the farm, the conserved water is a transportation loss for which the District as holder of the water right may apply. Applications may be the result of piping, lining, change in District point of diversion, or other capital improvements or methodology which conserves water and meets the state's program requirements. The allocation of conserved water as the result of a District project and the expenditure of District funds and personnel results in a benefit to the District as a whole so long as nowater user's ability to legally apply the user's beneficial allocation occurs.
- (b) Water User Applications. When the conserved water occurs past the District's point of diversion to the farm, then the conserved water is a transportation loss for which the water user beneficially applying irrigation to the landowner's own property may apply. The allocation of conserved water as the result of the water user project and expenditure is a benefit to the landowner applying for the conserved water project proportionate to the amount of water at that diversion allocated to the applicant.

7. Appeal Process

District patrons shall have period of sixty (60) days from the date of the adoption of the Policy to petition for a vote by all District patrons on the Policy. The petition for a vote shall be governed by the applicable statutes governing elections or recalls in the District. District patrons shall also have a period of thirty (30) days from the receipt of a notice that a water conservation project is adopted by the Board within which to file a notice of an appeal requesting review by the Board for failure to follow the Policy of the District in adopting the water conservation project.

8. Review of Policy

The Board shall review and update the Policy at the first regularly scheduled board meeting following every fifth anniversary of the Board either adopting, or reviewing and updating, the Policy. The Board may, in its sole discretion, review and update the Policy at any other meeting of the Board. The Board shall follow the process and provisions of the Policy, as required by OAR 690-018-0025(2), whenever reviewing and updating the Policy.
