***Example for Line 5a calculation** to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each water right involved as follows:
 - a. Divide total authorized cfs by total acres in the water right (*for C12345, 1.25 cfs ÷ 100 ac*); then multiply by the number of acres to be transferred to get the transfer cfs (*x 45 ac = 0.56 cfs*).
 - b. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (*For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs*)
2. Add cfs for the portions of water rights on all the land included in the transfer; however **do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land**. The fee should be assessed only once for each “on the ground” acre included in the transfer. (*In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0*).

Explain in your own words what you propose to accomplish with this transfer application, and why:
We would like to return the 7.6 acres of primary and supplemental irrigation back to the place of use authorized in the original certificates because the current location is more difficult to farm than was expected. These rights, originally authorized as part of Canceled Certificates 25918, 25924, 37255, 83217 and 83219, were moved to the current location under Transfer T-10996. The certificates issued after completion of T-10996 and involved in this transfer application are 88259, 88260, 88261, 88262 and 88263. The locations of POD C for Certificate 88261 and POD LL for Certificate 88263 are also being redescribed in this application, based on a 2014 USDA aerial image.

Description of Water Delivery System

System capacity: **0.40** cubic feet per second (cfs) OR
_____ gallons per minute (gpm)

MAR 20 2017

SALEM, OR

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. Water from High Creek enters the Upper Stice Ditch (formerly known as the Pehling-McFadden Ditch) at the High Creek POD. There is no control structure at this location except for a Waterman gate at the low side of the ditch that allows water to be forwarded to Rock Creek via a ditch. A measurement in an approximately 15-foot-long by 36-inch-diameter CMP pipe located about 200 feet below the POD indicates the ditch capacity is 32.9 cfs.

A portable pump intake with a fish screen is placed in the Upper Stice Ditch at the Rediversion POD (which will no longer be used). The water is forwarded upslope to a bulge using a portable 4-cylinder 10-hp Deutz Diesel engine and a Cornell centrifugal pump with a 6-inch by 4-inch discharge. There is a flowmeter at this pump. The pipeline to the bulge consists of approximately 800 feet of 5-inch-diameter pipe. The Rediversion POD pump has a measured capacity of 0.71 cfs.

An Isuzu tractor with a 4-cylinder 49-hp diesel engine connected by a PTO to a Berkeley centrifugal pump with a 4-inch x 2½ discharge forwards water from the bulge to a traveler. The ABI Model 90 traveler has 1,150 feet of 4-inch HDPE pipe connected to a Big Gun with a 24-mm nozzle. The nozzle has a theoretical capacity of 0.40 cfs.

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. SALEM, OR

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use.

POD C consists of a headgate on Rock Creek that allows water to be diverted about 50 feet downstream to a 3-foot-wide Cipoletti weir and then to a fish screen. Water then passes into a 4,100 feet 24-inch-diameter welded steel pipe and CMP pipe that forms the beginning of the High Ditch. A redirection point on the High Ditch in the SW NW of Section 23 in T13S, R24E, WM. allows water from the High Ditch to be released to a drainage that flows into Lupine Lake (formerly known as Beaver Pond), which has a connection to Upper Stice Ditch. The redirection point consists of a 4-foot concrete box with weir boards.

The location of POD C is being redescribed in this application, based on a 2014 U.S. Department of Agriculture Farm Service Agency (USDA/FSA) National Agriculture Imagery Program (NAIP aerial image (gway 2834373 02 NAIPM14).
