\*Example for Line 5a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each water right involved as follows:

a. Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs  $\div$ 100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac = 0.56 cfs).

b. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs)

2. Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land. The fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0).

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. Certificate 80462 authorizes the right to store 600 acre-feet of water in Howard Prairie Reservoir. The reservoir captures inflow from Grizzly Creek. The primary outflow from the dam discharges back into several canals and Grizzly Creek, a tributary of Jenny Creek. Water will be delivered through Talent Irrigation District's canal at a point approximately 850 feet South of the Southwest corner of Donation Land Claim No. 45 situated in Section 15, Township 39 South, Range 1 East of the Willamette Meridian in Jackson County, Oregon. The delivery system consists of an approximately 1.8 mile long canal similar to TID's delivery canal, terminating at the Terrace Street Pump Station. A 400 HP pump station sends flow through a 1.2 mile long 24" steel pipeline to Ashland's Water Treatment Plant, where is blended with water from Ashland Creek and treated to drinking water standards.
