#### Your transfer application will be returned if any of the map requirements listed below are not met.

Please be sure that the transfer application map you submit includes all the required items and matches the existing water right map. Check all boxes that apply.

<b>S</b>	□\N/A	Certified Water Right Examiner (CWRE) Stamp and Original Signature. For a list of CWREs, see <a href="http://apps.wrd.state.or.us/apps/wr/cwre_license_view/">http://apps.wrd.state.or.us/apps/wr/cwre_license_view/</a> . CWRE stamp and signature are not required for substitutions.	
***************************************	□ N/A	If more than three water rights are involved, separate maps are needed for each water right.	
V		Permanent quality printed with dark ink on good quality paper.  RECEIVED	
4	,	The size of the map can be 8½ x 11 inches, 8½ x 14 inches, 11 x 17 inches, or up to 30 x 30 inches. For 30 x 30 inch maps, one extra copy is required.	
	\	A north arrow, a legend, and scale.  OWRD	
		The scale of the map must be: 1 inch = 400 feet, 1 inch = 1,320 feet, the scale of the Final Proof/Claim of Beneficial Use Map (the map used when the permit was certificated), the scale of the county assessor map if the scale is not smaller than 1 inch = 1,320 feet, or a scale that has been pre-approved by the Department.	
		Township, Range, Section, 1/4 1/4, DLC, Government Lot, and other recognized public land survey lines.	
		Tax lot boundaries (property lines) are required. Tax lot numbers are recommended.	
		Major physical features including rivers and creeks showing direction of flow, lakes and reservoirs, roads, and railroads.	
		Major water delivery system features from the point(s) of diversion/appropriation such as main pipelines, canals, and ditches.	
7		Existing place of use that includes separate hachuring for each water right, priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions. If less than the entirety of the water right is being changed, a separate hachuring is needed for lands left unchanged.	
1	N/A	Proposed place of use that includes separate hachuring for each water right, priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions.	
		Existing point(s) of diversion or well(s) with distance and bearing or coordinates from a recognized survey corner. This information can be found in your water right certificate or permit.	
	N/A	If you are proposing a change in point(s) of diversion or well(s), showing frozest deat on and label it clearly with distance and bearing or coordinates. If GPS coordinates are used, latitude-longitude coordinates may be expressed as either degrees-minutes saconds with at least one digit after the decimal (example – 42°32'15.5") or degrees-decimal with five or more digits after the decimal (example – 42.53764°). -	for Line 5a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100		

\*E of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each water right involved as follows:

a. Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs  $\div$ 100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac = 0.56 cfs).

If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs

2. Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land. The fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0).

## **INSTRUCTIONS** for editing the Application Form

To add additional lines to tables within the forms or to copy and paste additional Part 5 pages, please save the application form to your computer. Unlock the document by using one of the following

instructions for your Microsoft Word software version:

# RECEIVED

#### Microsoft Word 2003

NOV 21 2017

Unlock the document by one of the following:

OWRD

- Using the Tools menu => click Unprotect Document;
   OR
- Using the Forms toolbar => click on the Protect/Unprotect icon.

To relock the document to enable the checkboxes to work, you will need to:

- Using the Tools menu => click Protect Document;
   OR
- Using the Forms toolbar => click on the Protect/Unprotect icon.

Once the application has been unlocked, you may:

- add additional rows to tables using the Table tools, and
- select and copy the pages of Part 5 and paste as many additional sets of Part 5 pages as needed at the end of the application.

After editing, re-lock the document to enable checkboxes to work.

#### Microsoft Word 2007

- Unlock the document by clicking the Review tab, then click Protect Document, then click
   Stop Protect
- To relock the document, click Editing Restrictions, then click Allow Only This Type of Editing, select Filling In Forms from the drop-down menu, then check Yes, Start Enforcing Protection.

#### Microsoft Word 2010

- Unlock the document by clicking the Review tab, toggle the Restrict Editing icon at the upper right, then click Stop Protect at the bottom right. Then uncheck the "Allow only this type of editing in the document: Filling in forms" in the "Editing restrictions" section on the right-hand list of options.
- To relock the document, check the Editing Restrictions/Allow Only This Type of Editing/Filling In Forms box from the drop-down menu, then check Yes, Start Enforcing Protection. You do not need to assign a password for the editing restrictions.

NOV 2 9 2017

#### Other Alternatives:

- Photocopy pages or tables in Part 5, mark-through any non-applicable information, med attack photocopied pages to document in the appropriate location, and manually amend page numbers as necessary (e.g. Page 5 6 of 9 10).
- You may refer to additional attachments that you may include, such as separately produced tables or spreadsheets to convey large numbers of rows of place of use listings, owner/property parcels, etc. You may contact the Department at 503-986-0900 and ask for Transfer Staff if you have questions.

Part 5 of 5 - Water Right Information

Please use a separate Part 5 for each water right being changed. See instructions on page 6, to copy and paste additional Part 5s, or to add additional rows to tables within the form.

	CERTIFICATE	# <u>30908</u>	RECEIVED
Description of W	ater Delivery System	RECEIVED	
System capacity:	6.42 cubic feet per second (cfs) OR		_
	gallons per minute (gpm)	NOV 2 9 2017	OWRD

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and philkless used to divert, convey and apply the water at the authorized place of use. The system capacity reflects the combination of all four water rights. The current water delivery system is divided into two points of diversion The upper diversion know as "Mays Diversion" and the lower diversion know as the Bonney Diversion. The Bonney Diversion is a channel spanning concrete dam with steel stantions and removalble wooden flashboards. The Bonney Diversion only serves the Lindell Property. Water diverted from the Dam flows approxamatly 1500 feet in an open ditch, and under the US Highway 197, where a pump station delivers it in a pressurized pipe to a number of pivots, wheel lines and handlines. The from the pumping station flow through an open ditch to a area in the floodplain where an artificial wetland has been created, there is no free and open connection back to the stream for fish.

The Mays Dodd diversion serves one other water user, with the Lindell turnout being at the end on the Ditch. Water is diverted from a pushup dam into an open ditch, where it flows 2,750 to a pump station that serves one pivot as well as numerous wheel lines and hand lines. The tail water from the end pumping station travels 1,800 feet before reaching the stream again.

Table 1. Location of Authorized and Proposed Point(s) of Diversion (POD) or Appropriation (POA) (Note: If the POD/POA name is not specified on the certificate, assign it a name or number here.)

**Description of Water Delivery System** 

System capacity: 6.42 cubic feet per second (cfs) OR

gallons per minute (gpm)

NOV 21 2017. OWRD

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use. The system capacity reflects the combination of all four water rights. The current water delivery system is divided into two points of diversion The upper diversion know as "Mays Diversion" and the lower diversion know as the Bonney Diversion. The Bonney Diversion is a channel spanning concrete dam with steel stantions and removable wooden flashboards. The Bonney Diversion only serves the Lindell Property. Water diverted from the Dam flows approxamatly 1500 feet in an open ditch, and under the US Highway 197, where a pump station delivers it in a pressurized pipe to a number of pivots, wheel lines and handlines. The from the pumping station flow through an open ditch to a area in the floodplain where an artificial wetland has been created, there is no free and open connection back to the stream for fish.

The Mays Dodd diversion serves one other water user, with the Lindell turnout being at the end on the Ditch. Water is diverted from a pushup dam into an open ditch, where it flows 2,750 to a pump station that serves one pivot as well as numerous wheel lines and hand lines. The tail water from the end pumping station travels 1,800 feet before reaching the stream again.
