In your own words tell us what conservations measures you have made or propose to make and the reason for the change(s): We are planning on a drip irrigation system using emitters that will dramatically reduce the amount of water needed to irrigate the 21.6 acres currently under irrigation. The changes are being made to replace aging infrastructure, improve business efficiencies, and to conserve water resources.

➡ To meet State Land Use Consistency Requirements, you must list all local governments (each county, city, municipal corporation, or tribal government) within whose jurisdiction the conservation project and/or proposed instream reach will be located.

Describe the pre-project water delivery system. Include information on the diversion structure, pumps, and conveyance facilities (including canals, pipelines and sprinklers used to divert, convey and apply the water at the authorized place of use). *Provide sufficient detail for the Department to determine the system capacity.* The current system uses a 1 hp pump that is capable of producing 100GPM. It diverts water from the authorized point of appropriation (well) on the property. A 3-inch main line carries water from the well to the irrigation system. The main line has two laterals, each with 2-inch pipe and rain bird simple emitters. Both laterals have ten risers. The system uses two laterals at a time with up to 20 Rain Bird sprinklers at a time. Each sprinkler delivers water at a rate of 5 gallons per minute.

Table 1: Pre-Project Description

List: A) the maximum rate and annual duty (volume) of water that may be diverted **as stated on the water right of record**; and B) the maximum amount of water that can be diverted using the pre-project facilities (“**system capacity**”). If there are multiple priority dates on the water right, list the rate and duty associated with each priority date. *(If the water right is only limited by rate, do not list a duty, and conversely, if the water is only limited by duty, do not list a rate.)*

Describe the proposed changes to the physical system, operations and application methods that will result in the conservation of water. If these proposed changes will change the point of diversion, you must meet the ODFW fish screen and bypass requirements pursuant to ORS 540.525. *Please include a description and details of how the estimate of water conserved was determined. Please provide sufficient detail for the Department to provide notice of the project.* We will be replacing the current system with drip tape emitter. Each emitter produces .5 gallons per hour (.008). The system will irrigate one zone at a time. Each zone is approximately 3 acres and water will be applied at 35 gpm (.09cfs) per zone. Each zone will be irrigated for up to 4 hrs. per day. The project area will have 6 zone.

Place of Use Involved in Conservation Measures Each zone will be watered up to 1 time per day for up to 184 days during the irrigation season.

List only the part of the right that will be affected. If the entire right is being affected, just state "entire Certificate."

Project Schedule, Funding, and
Fee Calculation**

MITIGATION:

OWRD

Describe any expected effects from the proposed allocation of conserved water on other water rights. Describe what currently happens to the water that is proposed to be conserved. The water was originally used for irrigation at the maximum rate and duty. The current crop type will require less water and can be more efficiently managed. No effects to other water rights is expected. After the project is completed, the state's portion of the conserved water will remain in the aquifer. See attachment B for a map of the acres we propose to use our portion of the conserved water. Describe any mitigation or other measures that are planned to avoid harm to other water rights. NA- We are not proposing any mitigation because the project is not expected to harm other water rights. (We are not changing the POA as part of this project.)

PROPOSED USE:

☒ ☐ N/A For new out-of-stream uses, describe the intended use and boundaries of the expected area within which the diversion structures and places of use of the applicants' conserved water right will be located. This is land other than that to which this water right is appurtenant. Intended Use: Irrigation; Boundaries: See attachment B(application maps)

☐ For instream uses to be created:

Originating Water Right (as identified in Part 3)	Priority Date	Source	Proposed Instream Period	Rate (cfs)*	Volume (ac-ft)**
TOTAL VOLUME					

*Tip: To calculate rate (if other than the rate allowed by the right), divide the volume by the number of days in the period and then divide by 1.983471; or

To calculate volume, multiply the rate by the number of days in the instream period and then multiply by 1.983471.

Note: The instream rate may not exceed the maximum rate conserved and the total volume may not exceed to maximum volume or duty conserved (Table 3, Column C)

☐ Water is requested to be protected within a reach. Location of the proposed reach (identify the extent of the reach): (e.g., from the upstream POD located at RM _____ to downstream location at the mouth at RM _____) _____

OR

☐ Water is requested to be protected at a point at the following location (i.e. legal description of the point of diversion (POD)) _____

Public Use for which conserved water right should be managed under an instream right (check at least one box):

- ☐ N/A- The source is groundwater. The portion of conserved water held by the state will remain in the source aquifer. Conservation, maintenance and enhancement of aquatic and fish life, wildlife, fish and wildlife habitat, and other ecological values.
- ☐ Recreation.
- ☐ Pollution Abatement.

List any existing instream water rights at the same point or within the same requested reach(es):

None.

Instream Water Right Certificates: _____

Is it your intent to have the proposed instream water right transfer be additive to any instream water right established under ORS 537.348 (instream transfer application process) and ORS 537.470 (allocation of conserved water) and replace a portion of any instream water right established under ORS 537.341 (state agency application process) and ORS 537.346 (conversion of minimum perennial streamflows) with an earlier priority date?

Yes

No. If no, please explain your intent below: N/A - the source is groundwater. The portion of the conserved water to be held by the State to remain in the source aquifer for certificate 40768

Is the requested instream flow intended to exceed the estimated average natural flow or natural lake level occurring from the drainage system? N/A - the source is groundwater.

No; OR

Yes (Provide supporting documentation that demonstrates why additional flows are significant for the public use requested.); OR

Yes, and it is presumed that flows that exceed the estimated average natural flow or natural lake levels are significant because:

The requested flow does not exceed the maximum amount of any instream water right applied for under ORS 537.338 (state agency instream water right application process); the requested public use is for the same public use; and the requested reach covers a portion or same reach as the state agency instream water right; and

The stream is in an ODFW flow restoration priority watershed during the requested instream period; or

The stream is listed as water quality limited by DEQ.

PROJECT SCHEDULE:

N/A For a project that has **not** been completed, please provide the dates on which the applicant intends to do the following:
