Part 2 of 5 – Transfer Application Map Checklist

Your transfer application will be returned if any of the map requirements listed below are not met.

Please be sure that the transfer application map you submit includes all the required items and matches the existing water right map. Check all boxes that apply.

- N/A Certified Water Right Examiner (CWRE) Stamp and Original Signature. For a list of CWREs, see http://apps.wrd.state.or.us/apps/wr/cwre_license_view/. CWRE stamp and signature are not required for substitutions.
- N/A If **more than three** water rights are involved, separate maps are needed for each water right.
- Permanent quality printed with dark ink on good quality paper.
- The size of the map can be 8½ x 11 inches, 8½ x 14 inches, 11 x 17 inches, or up to 30 x 30 inches. For 30 x 30 inch maps, one extra copy is required.
- A north arrow, a legend, and scale.
- The scale of the map must be: 1 inch = 400 feet, 1 inch = 1,320 feet, the scale of the Final Proof/Claim of Beneficial Use Map (the map used when the permit was certificated), the scale of the county assessor map if the scale is not smaller than 1 inch = 1,320 feet, or a scale that has been pre-approved by the Department.

CERTIFICATE # 41818

Description of Water Delivery System

System capacity: 1.33 cubic feet per second (cfs) OR
 _____ gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. **There is a 50-hp centrifugal pump at the river POD. The pumped water is conveyed to the place of use by approximately 3,250 feet of buried and above ground 8-inch-diameter mainline. The mainline has connections approximately 150 feet apart to allow use of Big Guns and/ or lateral lines with sprinklers.**

There are two Big Gun systems, each with a 40 or 50-hp booster pump and reel containing 6-inch-diameter black hose. Different nozzle sizes ranging from 0.8 to 1.3 inches are available. In addition, there are approximately 24,000 feet of 3-inch-diameter lateral lines with 600 sprinklers with 11/64th inch nozzles available for use with this and other water rights.

The lift from the river to the pump is approximately 8 feet. The pump operating pressure is typically 100 psi. The place of use is estimated to be 14 feet lower than the pump. The pump capacity calculators available to CWREs on the Department’s website indicates the pump capacity is 1.33 cfs.

Nelson 150 Series Big Gun sprinkler information available online indicates a Big Gun with a 1.3-inch nozzle operating at 100 psi can deliver 500 gpm (1.11 cfs).

The sprinkler information table attached to Claims of Beneficial Use forms indicates 11/64th inch nozzles can deliver 6.6 gpm at 60 psi. Conservatively assuming the nozzles deliver at least 7 gpm at 100 psi, the pump could supply 85 sprinklers.

The pump is the limiting factor on the irrigation system.

Certificate # 41818

For Place of Use or Character of Use Changes

Are there other water right certificates, water use permits or ground water registrations associated with the "from" or the "to" lands? Yes No

If YES, list the certificate, water use permit, or ground water registration numbers: NA.

Pursuant to ORS 540.510, any "layered" water use such as an irrigation right that is supplemental to a primary right proposed for transfer must be included in the transfer or be cancelled. Any change to a ground water registration must be filed separately in a ground water registration modification application.

For Substitution (ground water supplemental irrigation will be substituted for surface water primary irrigation)

Ground water supplemental Permit or Certificate # NA;
Surface water primary Certificate # NA.

For a change from Supplemental Irrigation Use to Primary Irrigation Use

Identify the primary certificate to be cancelled. Certificate # NA

For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation:

Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated with the corresponding well(s) in Table 1 above and on the accompanying application map.

Tip: You may search for well logs on the Department's web page at:
http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx

AND/OR

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Table 3. Construction of Point(s) of Appropriation

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.

Description of Water Delivery System

System capacity: 1.02 cubic feet per second (cfs) OR

_____ gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. A 40-hp centrifugal pump is used to divert water at the POD to approximately 2,900 feet of buried 8-inch-diameter mainline. The mainline has connections approximately 150 feet apart to allow use of Big Guns and/ or lateral lines with sprinklers.

There are two Big Gun systems, each with a 40 or 50-hp booster pump and reel containing about 1,400 feet of 6-inch-diameter black hose. Different nozzle sizes ranging from 0.8 to 1.3 inches are available. In addition, there are approximately 24,000 feet of 3-inch-diameter lateral lines with 600 sprinklers with 11/64th-inch nozzles available for use with this and other water rights.

The lift from the river to the pump is approximately 8 feet. The pump operating pressure is typically 90 psi. The place of use is estimated to be 4 feet lower than the pump. The pump capacity calculators available on the Department’s website indicates the pump capacity is 1.02 cfs.

Nelson 150 Series Big Gun sprinkler information available online indicates a Big Gun with a 1.3-inch nozzle operating at 90 psi can deliver 475 gpm (1.06 cfs).

The sprinkler information table attached to Claims of Beneficial Use forms indicates 11/64th inch nozzles can deliver 6.6 gpm at 60 psi. Conservatively assuming the nozzles deliver at least 7 gpm at 90 psi, the pump could supply approximately 65 sprinklers.

The pump is the limiting factor on the irrigation system.

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. Water is diverted at the Original POD using a 55-hp tractor with the PTO connected to a centrifugal pump. The water is conveyed to the place of use by about 1,000 feet of 8-inch-diameter mainline. The mainline has connections spaced approximately 50 feet apart.

There are two Big Gun systems, each with a 40 or 50-hp booster pump and reel containing about 1,400 feet of 6-inch-diameter black hose. Different nozzle sizes ranging from 0.8 to 1.3 inches are available. In addition, there are approximately 24,000 feet of 3-inch-diameter lateral lines with 600 sprinklers 11/64th-inch nozzles available for use with this and other water rights.

The lift from the river to the pump is approximately 8 feet. The pump operating pressure is typically 90 psi. The place of use is estimated to be 7 feet lower than the pump. The pump capacity calculators available to CWREs on the Department's website indicates the pump capacity is 1.43 cfs.

Nelson 150 Series Big Gun sprinkler information available online indicates a Big Gun with a 1.3-inch nozzle operating at 90 psi can deliver 475 gpm (1.06 cfs).

The sprinkler information table attached to Claims of Beneficial Use forms indicates 11/64th inch nozzles can deliver 6.6 gpm at 60 psi. Conservatively assuming the nozzles deliver at least 7 gpm at 90 psi, the pump could supply approximately 92 sprinklers.

The pump is the limiting factor on the irrigation system.

If YES, list the certificate, water use permit, or ground water registration numbers: NA.

Pursuant to ORS 540.510, any “layered” water use such as an irrigation right that is supplemental to a primary right proposed for transfer must be included in the transfer or be cancelled. Any change to a ground water registration must be filed separately in a ground water registration modification application.

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. **Water is diverted at POD 1 using a 50-hp centrifugal pump. The water is conveyed to the place of use by approximately 3,450 feet of buried and above-ground 8-inch-diameter mainline.**

There are two Big Gun systems, each with a 40 or 50-hp booster pump and reel containing about 1,400 feet of 6-inch-diameter black hose. Nelson 150 Series Big Gun sprinkler information available online indicates a Big Gun with a 1.3-inch nozzle operating at 100 psi can deliver 500 gpm (1.11 cfs).
