Part 5 of 5 - Water Right Information

Please use a separate Part 5 for each water right being changed. See instructions on page 6, to copy and paste additional Part 5s, or to add additional rows to tables within the form.

Description of Water Delivery System

System capacity: <u>5.7</u> cubic feet per second (cfs) **OR**

2559 gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. There is but one POD being used for all three of the rights being transferred in this application. Although C-31638 calls only the NE, NW of Sec 27, the point of diversion is clearly described in C-34396 and C-4060 and both ties agree with the other and are the same location. Water is taken from the Grande Ronde River by a 150 HP electric motor, using a 10" short couple turbine. Water goes into a 15" PVC buried line and later reduces into a 12" mainline, which becomes a 10" mainline that feeds the existing 2 \(^3\zeta\) pivots. The water is also diverted into a 1)' aluminum above ground portable mainline that divers water to the corners of the pivots, as well as into the grounds that do not have pivots yet. Hand lines are used to irrigate the remaininln lands with rights, which is labor intensive.

Table 1. Location of Authorized and Proposed Point(s) of Diversion (POD) or Appropriation (POA)

(Note: If the POD/POA name is not specified on the certificate, assign it a name or number here.)

POD/POA Name or Number	Is this POD/POA Authorized on the Certificate or is it Proposed?	If POA, OWRD Well Log ID# (or Well ID Tag # L)	Т	wp	R	ng	Sec	1/4, 1/4	Tax Lot, DLC or Gov't Lot	Measured Distances (from a recognized survey corner)
