Description of Water Delivery System

System capacity: 38.92 cubic feet per second (cfs) OR

_____ gallons per minute (gpm)

Revised

APR 20 2020

Salem, OR

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. There are four 200-hp pumps at the point of diversion (two on the bank and two on a barge). The pumps have 15-inch-diameter suctions and 10-inch-diameter discharges. Water is conveyed from the pumps to the paper-mill water pond via 6,000 feet of 30-inch-diameter concrete pipe. Water from the pond is subsequently diverted to various locations on the mill property. The 7.475 cfs involved with this transfer is part of the 13.0 cfs in Certificate 94802 that is currently leased instream under IL-1434.

Additional remarks: Certificate 94802 authorizes the use of up to 16.0 cfs for industrial/manufacturing use. The Applicant holds all 16.0 cfs of the water right which is appurtenant to the From Lands and is requesting approval to transfer 7.475 cfs of this rate to the City of Cornelius. The proposed change would reduce the authorized rate within the Applicant's entire place of use for Certificate 94802 to 8.525 cfs. The P.O.D., P.O.U. and character of use for the remainder of the water right will not change under this application (*i.e.*, the use will remain as industrial/manufacturing and the existing P.O.D. and P.O.U. will be retained until sought otherwise by IP). Finally, and again, the 7.475 cfs subject to transfer under this application is part of the 13.0 cfs of Certificate 94802 which is currently leased instream under the attached instream lease IL-1434.
