District Conveyance System:

Description of Delivery System: Water is diverted from the Columbia River at the Columbia Improvement District (CID) Point of Diversion (POD) located in the NENW of Section 2, T4N R25E W.M. with a battery of 6 - 500 hp short coupled turbine pumps. The diverted water is pumped through a pipe a short distance of 200 ft± inland to the CID Booster 1 pumping station consisting of 15 - 700 hp pumps. From the Booster 1 pumping station the water is transported southerly through the CID 72 inch buried mainline. Approximately 4 miles south of the Booster 1 pumping station the water flows through another booster pumping station (Booster 2). It also consists of 15 - 700 hp pumps. From Booster 2 the water continues through the 72" mainline another 4 miles± where it discharges into the CID canal. The CID pumping facilities are reported to have a flow capacity in excess of 300 cfs. The canal extends south 1.7 miles± where there is a tee in the canal that bifurcates the canal flow into east and west branches. Water which flows to the land that is involved in this Claim of Beneficial Use (COBU) report flows easterly down the east canal branch from the tee in the canal. Approximately 1 mile east of the canal tee there is a canal pumping station, Canal Pumping Station #4 (3 pumps totaling 800 hp with a flow capacity of 24.4 cfs). This pumping station is one of four canal pumping station that pump water to the land covered in this COBU report. The second canal pumping station which provides water to land covered in this COBU report is Canal Pumping Station #5 (4 pumps totaling 1300 hp with a flow capacity of 37.8 cfs). It is located approximately 1 mile east of Pumping Station #4. Approximately 1 mile east of Canal Pumping Station #5 there are two more canal pumping stations, Canal Pumping Station 6A (7 pumps totaling 3050 hp with a flow capacity of 58.2 cfs) and Canal Pumping Station 6B (4 pumps totaling 1900 hp with a flow capacity of 58.1 cfs) which also provide water to the land covered in this COBU report. All four of the canal pumping stations pump irrigation water through buried pipe networks that extend to the south and provide irrigation water to the land covered in this COBU report. The delivery system and flow meter location are further depicted on the attached Canyon Farm II Delivery System Maps.

Description of Beneficial Use:

Transfer T-13266 authorized irrigation of 5100.3 acres associated with six water right certificates. Details for each certificate are shown in the table below.

* The calculated rate is based on the design flow rate of 7.5 gpm/acre of the center pivot irrigation machines used to irrigate the land.

**Refer to Page 9 of 9 for pump station flows.

The beneficial use consisted of irrigating the acres authorized with the rate authorized. The crops grown were corn and potatoes.

Method Used to Apply Water: 45 center pivot irrigation machines were/are used to irrigate the land involved with this COBU report.

Method Used to Calculate Beneficial Use:

The 45 center pivot irrigation machines were designed to apply 7.5 gpm/acre. This value was used to determine the calculated system rate shown in the CLAIM SUMMARY table above.

The output of the four Canal Pumping Stations was calculated using the formula:
