

Part 5c of 5d – Water Right

Please use a separate Part 5 for each water right being changed. See instructions on page 6, to copy and paste additional Part 5s, or to add additional rows to tables within the form.

CERTIFICATE # 47384

Description of Water Delivery System

System capacity: **0.24** cubic feet per second (cfs) OR
 _____ gallons per minute (gpm)

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. Water is diverted from the point of diversion on the stream to capture the live flow from the stream through an 8-inch-diameter Pump Rite L-250 fish screen submerged within the creek. When water is needed, a gate valve connecting the fish screen to an 8-inch PVC pipe is opened, allowing water to gravity flow through the 8-inch PVC pipe connected to a 10-inch PVC pipe running underground from the creek to the pond, thereby using the reservoir as a bulge in the system. Water is pumped from the reservoir at the re-diversion POD using a centrifugal pump with a fish screen. Water from the reservoir is conveyed through a six-inch buried mainline to the place of use.
