## **Groundwater Transfer Review Summary Form**

Transfer/PA # T- <u>13559</u>
GW Reviewer Phillip Marcy Date Review Completed: _01/21/2021_
Summary of Same Source Review:
☐ The proposed change in point of appropriation is not within the same aquifer as per OAR 690-380-2110(2).
Summary of Injury Review:
☐ The proposed transfer will result in another, existing water right not receiving previously available water to which it is legally entitled or result in significant interference with a surface water source as per 690-380-0100(3).
Summary of GW-SW Transfer Similarity Review:
$\Box$ The proposed SW-GW transfer doesn't meet the definition of "similarly" as per OAR 690-380-2130.
This is only a summary. Documentation is attached and should be read thoroughly to understand the basis for determinations.

	in interference with <b>another ground water right</b> ?
	Yes No Comments: The proposed changes to this right would redistribute pumping to the east and southeast, relative to the authorized POA location. This change would not move pumping considerably closer to any other groundwater right.
	b) If yes, would this proposed change, at its maximum allowed rate of use, likely result in another groundwater right not receiving the water to which it is legally entitled?  Yes No If yes, explain: NA
5.	a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with <b>another surface water source</b> ?
	Yes Do Comments: The proposed APOA well locations are somewhat closer to Owl Creek to the east than the currently authorized POA, most notably BENT 4675 at a distance of 1,000 feet versus 2,300 feet at the current location.
	b) If yes, at its maximum allowed rate of use, what is the expected change in degree of interference with any <b>surface water sources</b> resulting from the proposed change?
	Stream: Owl Creek Minimal Significant
	Stream:
	Provide context for minimal/significant impact: <u>The cumulative effects of all proposed changes to GR-2992, GR-2993, GR-2994 (this right), and GR-2995 result in a distribution of pumping similar to the original distribution. The key change is that all involved rights can</u>
	irrigate authorized places of use from any or all wells, which is not anticipated to result in significant changes to surface water impacts.
6.	For SW-GW transfers, will the proposed change in point of diversion affect the surface water source similarly (as per OAR 690-380-2130) to the authorized point of diversion specified in the water use subject to transfer?  \[ \sum \text{Yes}  \text{No}  \text{Comments: NA} \]
7.	What conditions or other changes in the application are necessary to address any potential issues identified above: <u>None.</u>
8.	Any additional comments:
