*Example for Line 5a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

- 1. For irrigation calculate cfs for each water right involved as follows:
 - a. Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs \div 100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac= 0.56 cfs).
 - b. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs)
- 2. Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land. The fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0).

Explain in your own words what you propose to accomplish with this transfer application, and why:

Existing water right certificate was for the industrial use of washing sand and gravel. This was modified to General Industrial by a letter to the file pursuant to ORS 540.520(9) and OAR 690-380-2340. This transfer is to allow dust suppression and other general industrial uses over the entire area now operated as a sand and gravel extraction operation by Delta Sand and Gravel Co. This transfer does not propose an increase in the amount of water or rate of use granted by certificate 65679.

If you need additional space, continue on a separate piece of paper and attach to the application as "Attachment 1".

Description of Water Delivery System

RECEIVED

System capacity: 7.14 cubic feet per second (cfs) OR

JUL 26 2021

3205 gallons per minute (gpm)

OWRD

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use.

Water is pumped from the Willamette River via two vertical turbine electric pumps permanently installed on the bank and delivered through 12-inch steel pipes to the gravel washing facility and dust-suppression-truck filling station.

The southern pump is a Berkley pump, serial number 7701429, run by a 200hp General Electric model 5K6278XH1A electric motor with a capacity of 3,000 gpm (6.68 cfs) at 220 feet of head according to the information plaque riveted to the pump.

The northern pump is a Worthington 12HH110 vertical turbine pump, serial number VTP-10017777, run by a 150hp 3-phase 1775 RPM electric motor. The OWRD Pump Capacity Calculation Sheet gives the pumping rate for a 150hp vertical turbine pump operating at 34 feet of lift with a residual pressure of 95 psi as 14.27 cfs.

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Table 3. Construction of Point(s) of Appropriation

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.
