A 30-horsepower motor and centrifugal pump divert water from the river, which has been conveyed in pipelines to a variety of sprinklers and Big guns depending on the crops, weather, soils and other variables.*

Table 1: Pre-Project Description

List: A) the maximum rate and annual duty (volume) of water that may be diverted **as stated on the water right of record**; and B) the maximum amount of water that can be diverted using the pre-project facilities ("**system capacity**"). If there are multiple priority dates on the water right, list the rate and duty associated with each priority date. *(If the water right is only limited by rate, do not list a duty. Conversely, if the water is only limited by duty, do not list a rate).*

If these proposed changes will change the point of diversion, you must meet the ODFW fish screen and bypass requirements pursuant to ORS 540.525. Please include a description and details of how the estimate of water conserved was determined. Please provide sufficient detail for the Department to provide notice of the project. The system has been changed from overhead sprinklers and Big Guns to strips of driplines next to the rows of orchard trees.

**Part 4 of 4 – Mitigation, Proposed Use,
Project Schedule, Funding, and

MITIGATION:

Describe any expected effects from the proposed allocation of conserved water on other water rights. Describe what currently happens to the water that is proposed to be conserved. The conserved water is used for irrigating crops depending on the crop being grown, the weather conditions, the soils and other variables; and no effects are expected on any other water rights.

Describe any mitigation or other measures that are planned to avoid harm to other water rights. It is not known how any other water right could be harmed by the conservation measures being implemented.

PROPOSED USE:

New Out-of Stream Uses:

N/A For new out-of-stream uses, describe the intended use and boundaries of the expected area within which the diversion structures and places of use of the applicants' conserved water right will be located. This is land other than that to which this water right is appurtenant. Intended Use: Irrigation; Boundaries: tax lots 603 & 608 of S2, T13S, R1W

Will the new use require a change or additional point of diversion/appropriation?

Yes No Unknown at this time

** To calculate volume, multiply the rate by the number of days in the instream period and then multiply by 1.983471.

Note: The instream rate may not exceed the maximum rate conserved and the total volume may not exceed to maximum duty or volume conserved (Table 3, Column C).

Location of the proposed instream water right.

Water is requested to be protected within a reach. Location of the proposed reach (identify the extent of the reach): (e.g., from the upstream POD located at RM ___ to downstream location at the mouth at RM ___) N/A

OR

- Water is requested to be protected at a point at the following location (i.e. legal description of the point of diversion (POD)): 1280' N & 1850' E of NE of DLC 38

Public Use for which conserved water right should be managed under an instream right (check at least one box):

- Conservation, maintenance and enhancement of aquatic and fish life, wildlife, fish and wildlife habitat, and other ecological values.
- Recreation and scenic attraction.
- Water Quality (e.g. pollution abatement).

List any existing instream water rights at the same point or within the same requested reach(es):

- None.
- Instream Water Right Certificates: _____

- N/A Is it your intent to have the proposed instream water right transfer be additive to any instream water right established under ORS 537.348 (instream transfer application process) and ORS 537.470 (allocation of conserved water) and replace a portion of any instream water right established under ORS 537.341 (state agency application process) and ORS 537.346 (conversion of minimum perennial streamflows) with an earlier priority date?

- Yes No. If no, please explain your intent below:

Is the requested instream flow intended to exceed the estimated average natural flow or natural lake level occurring from the drainage system?

- No; **OR**
- Yes (Provide supporting documentation that demonstrates why additional flows are significant for the public use requested.); **OR**
- Yes, and it is presumed that flows that exceed the estimated average natural flow or natural lake levels are significant because:
- The requested flow does not exceed the maximum amount of any instream water right applied for under ORS 537.338 (state agency instream water right application process); the requested public use is for the same public use; and the requested reach covers a portion or same reach as the state agency instream water right; **and**
- The stream is in an ODFW flow restoration priority watershed during the requested instream period; **or**
- The stream is listed as water quality limited by DEQ.
