CLAIM OF BENEFICIAL USE MAP

The Claim of Beneficial Use Map must be submitted with this claim. Claims submitted without the Claim of Beneficial Use map will be returned. The map shall be submitted on poly film at a scale of 1" = 1320 feet, 1" = 400 feet, or the original full-size scale of the county assessor map for the location.

The changes that were authorized under the transfer final order must be mapped based on the developed locations; new or additional points of appropriation and place of use.

In cases where the order involved additional points of appropriation, the additional points should be mapped based on their developed locations. The original points of appropriation should be mapped based on the original right of record at the time the transfer final order was issued.

In cases where the order involved changing the place of use for a portion of a water right, the portion of the place of use being changed should be mapped based on the developed location. If the transfer also included portions of the place of use that were not being modified, but were receiving a new or additional point of appropriation, the place of use for those lands should be mapped based on the original right of record at the time the transfer final order was issued.

Provide a general description of the survey method used to prepare the map. Examples of possible methods include, but are not limited to, a traverse survey, GPS, or the use of aerial photos. If the basis of the survey is an aerial photo, provide the source, date, series and the aerial photo identification number.

The irrigation systems were tied to approximate boundaries using a Trimble GeoXT 6000 GIS data collector. Point data was imported to Trimble Pathfinder software & converted to Statewide Lambert Projection & overlaid by imagery to verify accuracy.

SUBJECT: Water Right Transfer Application T-12375

Please find enclosed the Preliminary Determination indicating that, based on the information available, the Department intends to approve application T-12375. This document is an intermediate step in the approval process; water may not be used legally as proposed in the transfer application until a Final Order has been issued by the Department. Please read this entire letter carefully to determine your responsibility for additional action.

A public notice is being published in the Department's weekly publication and in the Lake County Examiner newspaper, simultaneously with issuance of the Preliminary Determination. The notice initiates a period in which any person may file either a protest opposing the decision proposed by the Department in the Preliminary Determination or a standing statement supporting the Department's decision. The protest period will end 30 days after the last date of newspaper publication.

If no protest is filed, the Department will issue a Final Order consistent with the Preliminary Determination. You should receive a copy of the Final Order about 30 days after the close of the protest period.

If a protest is filed, the application may be referred to a contested case proceeding. A contested case provides an opportunity for the proponents and opponents of the decision proposed in the Preliminary Determination to present information and arguments supporting their position in a quasi-judicial proceeding.

Please do not hesitate to contact me at 503-986-0886 or Patrick.K.Starnes@wrdd.state.or.us if I may be of assistance.

Sincerely,

Kelly Starnes

SUBJECT: Water Right Transfer Application T-12375

Please find enclosed the Preliminary Determination indicating that, based on the information available, the Department intends to approve application T-12375. This document is an intermediate step in the approval process; water may not be used legally as proposed in the transfer application until a Final Order has been issued by the Department. Please read this entire letter carefully to determine your responsibility for additional action.

A public notice is being published in the Department's weekly publication and in the Lake County Examiner newspaper, simultaneously with issuance of the Preliminary Determination. The notice initiates a period in which any person may file either a protest opposing the decision proposed by the Department in the Preliminary Determination or a standing statement supporting the Department's decision. The protest period will end 30 days after the last date of newspaper publication.

If no protest is filed, the Department will issue a Final Order consistent with the Preliminary Determination. You should receive a copy of the Final Order about 30 days after the close of the protest period.

If a protest is filed, the application may be referred to a contested case proceeding. A contested case provides an opportunity for the proponents and opponents of the decision proposed in the Preliminary Determination to present information and arguments supporting their position in a quasi-judicial proceeding.

Please do not hesitate to contact me at _____ if I may be of assistance.

Sincerely,

Transfer Specialist

Will the proposed POA develop the same aquifer (source) as the existing authorized POA?

☒ Yes ☐ No Comments: _____

The total depth of the "From" POA wells and the "To" POA wells range from 310 feet to 585 feet. The "From" and "To" POA wells obtain groundwater from various geologic units including a predominantly basin-fill sediment unit and a predominantly volcanic rocks and sediments unit below the basin-fill.

It appears both the "From" wells and the "To" POA wells obtain groundwater from what Miller (1984 and 1986) describes as the main groundwater reservoir. That reservoir includes groundwater in different geologic units. The reservoir has three characteristics. First, the "natural" groundwater level changes less than 1.5 feet annually, indicating the system is highly modulated. Second, the potentiometric surface was approximately 4292 feet elevation MSL basin-wide with Silver Lake an exception. Third, the reservoir consists of numerous water producing zones in several formations, all having an essentially common potentiometric level, and all being very transmissive in general.

3. a) Is there more than one source developed under the right (e.g., basalt and alluvium)?
☐ Yes ☒ No _____

It appears both the "From" and "To" POA wells obtain groundwater from what Miller (1984 and 1986) describes as the main groundwater reservoir. That reservoir includes groundwater in different geologic units.

- b) If yes, estimate the portion of the right supplied by each of the sources and describe any limitations that will need to be placed on the proposed change (rate, duty, etc.): _____

See part 3a above.

4. a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with another ground water right? ☒ Yes ☐ No Comments: _____

The groundwater drawdown at the water right well closest to the proposed "To" POA wells will increase. The calculated increase in groundwater drawdown at the closest water right well is about 10.4 feet by the end of the irrigation season using continuous pumping at the maximum rate as a worst case scenario. The change at more distant irrigation wells will be less. The nearby water right wells should be able to accommodate that drawdown change. The net affect on the groundwater system should be the same.

b) If yes, would this proposed change, at its maximum allowed rate of use, likely result in another groundwater right not receiving the water to which it is legally entitled?

☐ Yes ☒ No If yes, explain: _____

See comment in part 4a above.

5. a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with **another surface water source**?

☐ Yes ☒ No Comments: _____

The proposed POA change will move groundwater pumping closer to Silver Lake, Paulina Marsh, Ana Springs and Summer Lake.

Silver Lake and Paulina Marsh are geographically within the "main groundwater reservoir" area described by Miller (1984, 1986). State Observation well data for the Silver Lake and Paulina Marsh area indicate the "main groundwater reservoir" groundwater levels prior to the mid-1980s were similar to the Silver Lake and Paulina Marsh. A groundwater level decline since the early 1980s has lowered the groundwater levels below the lake and marsh. Now, the lake and marsh appear to be perched above the "main groundwater reservoir."

As noted, the proposed POA change will move groundwater pumping closer to Silver Lake and Paulina Marsh. Consequently, the seasonal groundwater level drawdown at the lake and marsh will increase. The calculated maximum increase drawdown at the lake and marsh by the end of the irrigation season is 1.7 feet and 1.8 feet respectively. Prior to the mid-1980s, this would have impacted the lake and marsh. Now, no impact to the lake and marsh is anticipated given both appear to be perched above the "main groundwater reservoir." The impact of the ongoing long-term "main groundwater reservoir" groundwater level decline should be the same.

As also noted, the proposed POA change will move groundwater pumping closer to Ana Springs and Summer Lake. Miller shows groundwater from the "main groundwater reservoir" discharging to Ana Springs and Summer Lake after crossing a narrow "steep" hydraulic gradient zone. The presence of the "steep" hydraulic gradient zone precludes calculating an increased seasonal drawdown at Ana Springs and Summer Lake due to the proposed POA change. The "steep" hydraulic gradient zone will likely dampen the increased seasonal drawdown at the spring and lake to less than detectable measurements. The impact of the ongoing long-term "main groundwater reservoir" groundwater level decline should be the same.

b) If yes, at its maximum allowed rate of use, what is the expected change in degree of interference with any **surface water sources** resulting from the proposed change?

Stream: <u>Silver Lake</u>	☒	Minimal	☐	Significant
Stream: <u>Paulina Marsh</u>	☒	Minimal	☐	Significant
Stream: <u>Ana Spring</u>	☒	Minimal	☐	Significant
Stream: <u>Summer Lake</u>	☒	Minimal	☐	Significant

Provide context for minimal/significant impact: _____

See comment in part 5a above.

6. What conditions or other changes in the application are necessary to address any potential issues identified above: _____

Note: the proposed "To" and "From" POA wells are within the Fort Rock groundwater limited area.

"Large" flow meter condition for both the "To" and "From" POA wells to ensure the pumping redistribution occurs, and no enlargement occurs.

Condition 7P (well tag condition) for both the "To" and "From" POA wells to ensure proper well identification.

Condition 7T (modified) for both the "To" and "From" POA wells: "Prior to use, the "To" and "From" POA wells shall be configured to allow a strictly clean water (no oil) static water level measurements with an electric-tape. That can include measurement access via an unobstructed vertical discharge pipe that allows the groundwater level to fluctuate freely within the discharge pipe (no valves, etc.). Otherwise, a dedicated measuring tube must be installed prior to use. The tube must be unobstructed, have a diameter of 3/4 inch (0.75 inch) or greater, and pursuant to figure 200-5 in OAR 690-200."

Marcy,

Everything looks good. I forwarded list pack info to you. We can move forward with the application.

Lake County Examiner is the correct Newspaper.

Do not need to extend completion date as these acres were irrigated last 5 years with a temp transfer. Everything should be in place.

Thanks,

Dennis

Subject: Transfer T-12375

Good afternoon:

I have completed the first phase of processing your transfer. There are a few items I need in order to proceed, which are listed below and are outlined in the cover letter of the attached packet:

- 1) Please review the Draft Final order and get back to me on any changes that need to be made and/or if it meets your intent and you want to proceed with the processing of the transfer. Written consent is needed to move forward with the next phase of processing, email is ok.
- 2) Please contact a title company to provide you with an ownership report. Most title companies in this region call them "listing packets". They are usually free and can be generated quickly. They can e-mail the report directly to me.
- 3) Please confirm the Lake County Examiner as the newspaper you wish to use for the publication notice.
- 4) I also want to mention that you can extend the completion date free of charge now. This is the time to do it, otherwise there is another process to go through if things don't work out as planned. We can move it out up to 5 years if you would like. If you finish sooner, that's great. Let me know. You can respond via e-mail if you prefer.
- 5) Lastly, the Watermaster, Brian Mayer, has required measuring devices on the new and existing points of appropriation. I have included his contact information so that you may discuss with him the type of measuring devices that needs to be installed.

Feel free to contact me if I can be of further assistance.

Thanks...

*Example for Line 5a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each water right involved as follows:
 - a. Divide total authorized cfs by total acres in the water right (*for C12345, 1.25 cfs ÷ 100 ac*); then multiply by the number of acres to be transferred to get the transfer cfs (*x 45 ac = 0.56 cfs*).
 - b. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (*For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs*)
2. Add cfs for the portions of water rights on all the land included in the transfer; however **do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land**. The fee should be assessed only once for each “on the ground” acre included in the transfer. (*In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0*).

Are there other water right certificates, water use permits or ground water registrations associated with the "from" or the "to" lands? ☐ Yes ☒ No

If YES, list the certificate, water use permit, or ground water registration numbers: _____.

 Pursuant to ORS 540.510, any "layered" water use such as an irrigation right that is supplemental to a primary right proposed for transfer must be included in the transfer or be cancelled. Any change to a ground water registration must be filed separately in a ground water registration modification application.

For Substitution (ground water supplemental irrigation will be substituted for surface water primary irrigation)

Ground water supplemental Permit or Certificate # _____;

Surface water primary Certificate # _____.

For a change from Supplemental Irrigation Use to Primary Irrigation Use

Identify the primary certificate to be cancelled. Certificate # _____

For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation:

- ☒ Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated with the corresponding well(s) in Table 1 above and on the accompanying application map.

Tip: You may search for well logs on the Department's web page at:

http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx

- ☐ Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.

- ☐ Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.

The right to the use of the water for the above purpose is restricted to beneficial use on the lands or place of use described.

The use shall conform to such reasonable rotation system as may be ordered by the proper state officer.

A description of the place of use to which this right is appurtenant is as follows:

The quantity of water diverted at the new point of appropriation (well) shall not exceed the quantity of water lawfully available from the original point of appropriation.

When required by the Department the water user shall install an in-line flow meter or other suitable device for measuring and recording the quantity of water used. The type and plans of the measuring device must be approved by the Department prior to beginning construction and shall be installed under the general supervision of the Department.

Water shall be acquired from the same aquifer as the original point of appropriation.

This certificate describes that portion of the water right confirmed by Certificate 83561, State Record of Water Right Certificates, NOT modified by the provisions of an order of the Water Resources Director entered MAR 31 2008 approving Transfer Application 8375.

Reference: Application T- 12375

On May 9, 2016, we received your water right Transfer application. The application was accompanied by \$4850.00. Our receipt number 119765 is enclosed.

By copy of this letter, we are asking the Watermaster for a report regarding the potential for injury to existing water rights which may be caused by the requested change. A review form will also be sent to our groundwater staff to determine whether the proposed well accesses the same source of water as the original well.

Your application will be examined to determine whether additional information is needed. We will notify you if further information or corrections to the application or map are required.

This application may require publication of a notice for two consecutive weeks in a newspaper with general circulation in the area where the water right is located. If it is determined that newspaper notice will be required, the Department will prepare the notice and notify you of the cost. You will be responsible for submitting payment to the Department prior to publication of the notice.

Except as provided under ORS 540.510(3) for municipalities, you may not use water in the new place of use or from the new point of appropriation until a final order approving the transfer application has been issued by the Department.

In order to avoid any possible forfeiture of the water right, you should continue to use the water as described by your existing water right.

If the land is sold before the application is approved, the buyer's consent to the application will be required unless a recorded deed or other legal document clearly established that the water right was not conveyed in the sale.

Refer to the following page for a chart showing the steps and expected timelines for the processing of your application.

If you have any questions, please contact the Transfer Section at (503) 986-0807.
