#### 2. PLEASE READ - EXPLAINS WHY THIS FORM IN NEEDED

Within certain portions of the Umatilla Drainage Basin (i.e., Umatilla Basin), irrigation water rights have been issued that provide for the special use of Columbia River water under certain conditions. These are collectively referred to as "Mid-C Water Rights," managed by the Mid-Columbia Water Commission. These rights are in the names of Columbia Improvement District and East Improvement District.

Water may only be used under a Mid-C water right where "Planned Irrigation" activity under the Mid-C right has been described on maps filed with the Watermaster by February 14 for the upcoming irrigation season. "Planned Irrigation" activity is coordinated with the water user and is determined on an annual basis and is authorized for a single irrigation season at a time.

The purpose of this form is to make transfer applicants aware of potential effects to transfers when the authorized "off" or "from" lands or proposed "on" or "to" lands become temporarily layered with "Planned Irrigation" under a Mid-C managed water right for an irrigation season.

\*Example for Line 5a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each water right involved as follows:

Revised 7/7/2022

a. Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs ÷100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac= 0.56 cfs).

b. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs

2. Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land. The fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 5a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0).

Explain in your own words what you propose to accomplish with this transfer application, and why:

The Applicant proposes to change the place of use for a portion of Certificate 80705 which authorizes

primary irrigation, and to change the place of use for the corresponding supplemental irrigation authorized

by Certificate 81408. The Applicant understands that a Land Use Information Form is not required because
the proposed change is a change in place of use only, no structural changes will occur, the use of water is for
irrigation only, and the use is located within an exclusive farm use zone.

If you need additional space, continue on a separate piece of paper and attach to the application as "Attachment 1".

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. Water is appropriated from Butter Creek into two collection/pit wells that hold intakes for centrifugal pumps. The pumps discharge water through flow measuring devices into mainlines of various sizes throughout the farm to the place of use. Booster pumps are also utilized at various locations in the application system. Water is applied for beneficial use using wheel lines and pivot irrigation systems.

	If YES, list the certificate, water use permit, or ground water registration numbers: Certificate 81408 and Permit S-55339. The applicant is submitting a separate permit amendment application for Permit S-55339.										
•	Pursuant to ORS 540.510, any "layered" water use such as an irrigation right that is supplemental to a primary right proposed for transfer must be included in the transfer or be cancelled. Any change to a ground water registration must be filed separately in a ground water registration modification application.

Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated
with the corresponding well(s) in Table 1 above and on the accompanying application map.
Tip: You may search for well logs on the Department's web page at:
http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx

#### AND/OR

Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For proposed wells not yet constructed or built, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

#### Table 3. Construction of Point(s) of Appropriation – N/A

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.

#### **Description of Water Delivery System**

System capacity: 4.0 cubic feet per second (cfs) under Certificate 81408

Describe the current water delivery system or the system that was in place at some time within the last five years. Include information on the pumps, canals, pipelines, and sprinklers used to divert, convey, and apply the water at the authorized place of use. Water is appropriated from two deep wells which discharge water through flow measuring devices into mainlines of various sizes throughout the farm to the place of use. Booster pumps are also utilized at various locations in the application system. Water is applied for beneficial use using wheel lines and pivot irrigation systems.
