REFERENCE: District Temporary Transfer Application T-13965

Enclosed is a copy of the final order approving your TEMPORARY water right transfer application.

The temporary change shall be effective at the beginning of the <u>2022</u> irrigation season. The use shall revert to the original authorized place of use at the end of the <u>2026</u> irrigation season.

If you have any questions related to the approval of this transfer, you may contact your caseworker, Scott Grew, by telephone at (503) 986-0890 or by e-mail at Scott.A.Grew@oregon.gov.

Sincerely,

Nila Kamis

OF THE STATE OF OREGON

In the Matter of Transfer Application)	FINAL ORDER APPROVING TEMPORARY
T-13965, Harney County)	CHANGES IN PLACE OF USE AND POINTS
)	OF APPROPRIATION

Authority

Oregon Revised Statute (ORS) 537.705 and 540.505 to 540.580 establish the process in which a water right holder may submit a request to temporarily transfer the place of use and, if necessary to convey the water to the temporary place of use, the point of appropriation authorized under an existing water right. Oregon Administrative Rule (OAR) Chapter 690, Division 380 implements the statutes and provides the Department's procedures and criteria for evaluating transfer applications.

Applicants

CHRIS UNRUH 25289 HIPWELL LANE GRAND VIEW, ID 83624

EDWIN AND SHELLEY ENSZ 70122 N. NEWTON RD BURNS, OR 97720

JOHN F. AND MONICA R. ENSZ 10606 N. ROAD V ULYSSES, KS 67880

Findings of Fact

 On April 4, 2022, E CHRIS UNRUH, EDWIN AND SHELLEY ENSZ, AND JOHN F. AND MONICA R. ENSZ filed an application to temporarily change the place of use and change the points of appropriation to serve the proposed place of use under Certificates 91514, 93568 and 95978 for a period of 5 years. The Department assigned the application number T-13965.

This is a final order in other than a contested case. This order is subject to judicial review under ORS 183.484. Any petition for judicial review must be filed within the 60-day time period specified by ORS 183.484(2). Pursuant to ORS 536.075 and OAR 137-004-0080, you may petition for judicial review or petition the Director for reconsideration of this order. A petition for reconsideration may be granted or denied by the Director, and if no action is taken within 60 days following the date the petition was filed, the petition shall be deemed denied.

2. Notice of the application for transfer was published on April 5, 2022, pursuant to OAR 690-380-4000.

3. The portion of the first right to be transferred is as follows:

Certificate: 91514 in the name of JOHN ENSZ FARMS, LLC, EDWIN R. AND SHELLEY R.

ENSZ (perfected under Permit G-16039)

Use:

IRRIGATION of 66.5 ACRES

Priority Date: MARCH 21, 2005

Rate:

0.83 CUBIC FOOT PER SECOND

Limit/Duty:

The amount of water used for irrigation under this right, together with the amount secured under any other right existing for the same lands, is limited to a diversion of ONE-EIGHTIETH of one cubic foot per second and 3.0 acre-feet for each acre irrigated during the irrigation season of each

Period of Use: MARCH 1 THROUGH OCTOBER 31

Source:

23 S	32.5 E	WM	14	SE SE	9.9
				Total	41.4

Temporary Transfer Review Criteria

- 11. Water has been used within the last five years according to the terms and conditions of the rights. There is no evidence available that would demonstrate that the rights are subject to forfeiture under ORS 540.610.
- 12. A pump, pipeline, and sprinkler system sufficient to use the full amount of water allowed under the existing rights are present.
- The proposed changes would prevent the lands from which the water right is removed during the period of the temporary transfer from receiving water under the transferred rights, as required by ORS 540.523(7).
- 14. The proposed changes would not result in injury to other water rights. This finding is made through an abbreviated review recognizing that the transfer may be revoked under ORS 540.523(5) if the Department later finds that the transfer is causing injury to any existing water right.

Conclusions of Law

The temporary changes in place of use and points of appropriation to serve the temporary place of use proposed in Temporary Transfer Application T-13965 are consistent with the requirements of ORS 540.523 and OAR 690-380-8000.

Now, therefore, it is ORDERED:

 The temporary changes in place of use and change in points of appropriation to serve the temporary place of use proposed in Temporary Transfer Application T-13965 are approved.

- 2. The former place of use **shall not** be irrigated as part of these water rights during the 2022, 2023, 2024, 2025 and 2026 irrigation seasons.
- The use shall revert to the authorized place of use at the end of the 2026 irrigation season.
 The authorization to use the temporary point of appropriation shall be terminated concurrently.
- 4. The approval of this temporary transfer may be revoked or modified if the Department finds the changes cause injury to any existing water right.
- The quantity of water diverted at the proposed temporary points of appropriation shall not exceed the quantity of water lawfully available at the original points of appropriation.
- 6. A subsequent application for permanent transfer of Certificates 91514, 93568, and 95978, shall be subject to a full and complete review to determine consistency with the requirements of OAR Chapter 690, Division 380. Approval of this temporary transfer does not establish a precedent for approval of a subsequent application filed for a permanent transfer.
- 7. The use of water at the temporary place of use authorized by this transfer shall be in accordance with the terms and conditions of Certificates 91514, 93568 and 95978.
- The time during which water is used under this approved temporary transfer does not apply toward a finding of forfeiture under ORS 540.610.
- 9. Water use measurement conditions:
 - a. Before water use may begin under this order, the water user shall install a totalizing flow meter, or, with prior approval of the Director, another suitable measuring device, at each point of appropriation.
 - b. The water user shall maintain the meters or measuring devices in good working order.
 - c. The water user shall allow the Watermaster access to the meters or measuring devices; provided however, where the meters or measuring devices are located within a private structure, the Watermaster shall request access upon reasonable notice.

 The use of the remaining water rights described by Certificates 91514, 93568, and 95978, shall continue to be in accordance with the terms and conditions of Certificates 91514, 93568, and 95978.

Groundwater Transfer Review Summary Form

Transfer/PA # T- <u>13965</u>
GW Reviewer <u>Darrick E. Boschmann</u> Date Review Completed: <u>06/23/2022</u>
Summary of Same Source Review:
☐ The proposed change in point of appropriation is not within the same aquifer as per OAR 690-380-2110(2).
Summary of Injury Review:
☐ The proposed transfer will result in another, existing water right not receiving previously available water to which it is legally entitled or result in significant interference with a surface water source as per 690-380-0100(3).
Summary of GW-SW Transfer Similarity Review:
☐ The proposed SW-GW transfer doesn't meet the definition of "similarly" as per OAR 690-380-2130.
This is only a summary. Documentation is attached and should be read thoroughly to understand the basis for determinations.

Ground Water Review Form

Transfer Application: T- 13965

	a) Is there more than one source developed under the right (e.g., basalt and alluvium)? Yes No
	b) If yes, estimate the portion of the right supplied by each of the sources and describe any limitations that will need to be placed on the proposed change (rate, duty, etc.):
•	 a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with another ground water right? ☑ Yes ☐ No Comments:
	The proposed APOA are located to the up to ~1 mile west and southwest from the currently authorized wells. This will result in an incremental increase in interference with existing wells to the west and southwest. See below for anticipated certificate-specific changes in interference.
	b) If yes, would this proposed change, at its maximum allowed rate of use, likely result in another groundwater right not receiving the water to which it is legally entitled? Yes No If yes, explain:
	•91514
	The proposed APOA are located up to ~1 mile west of the currently authorized well. The nearest authorized POA to the proposed APOA is POD 1 under certificate 62472 (HARN 651), which is a distance of approximately 2,100 feet from proposed APOA HARN 51925. The potential drawdown from pumping under this scenario was calculated using the Theis equation (see attachments). The range of values used for the calculation are conservative and appropriate until better values become available. The calculation used a range of storage coefficient values from 0.01 – 0.0001. The transmissivity range used in the calculation (900 – 3622 ft²/day) is the transmissivity range derived from specific capacity from nearby wells. At the full authorized pumping rate, the results indicate a median calculated drawdown of 33.03 feet. Higher range outlying scenario results up to ~100 feet drawdown still would not meet the standard for substantial or undue interference given the thickness of the aquifer in the Harney Basin.
	•93568
	The proposed APOA are located up to ~0.6 miles west of the currently authorized well. The nearest authorized POA to the proposed APOA is POD 1 under certificate 62472 (HARN 651), which is a distance of approximately 2,100 feet from proposed APOA HARN 51925. Based on the Theis calculation scenarios above, and the lower authorized pumping rate under this certificate, any increase in interference would not meet the standard for substantial or undue interference.
	•95978
	There is no change in POA proposed for this certificate.

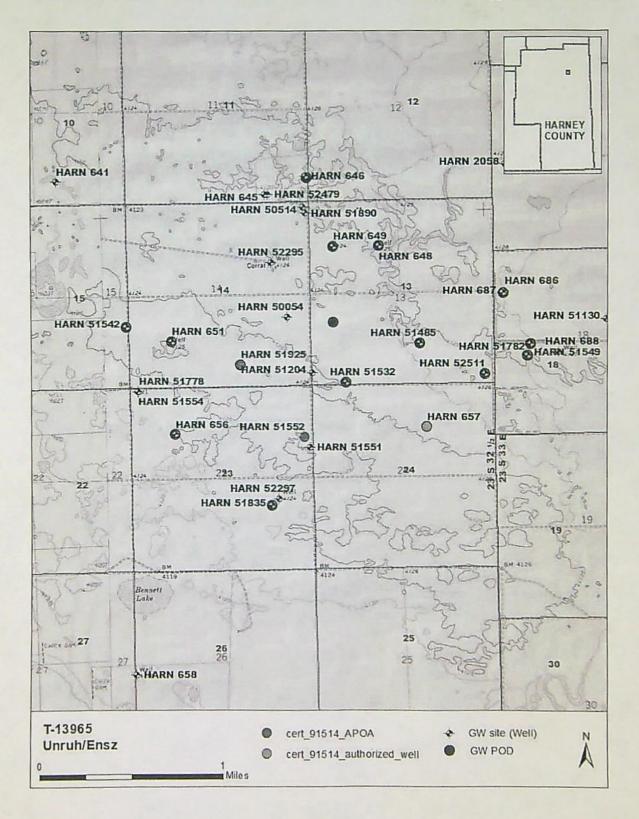

Ground Water Review Form

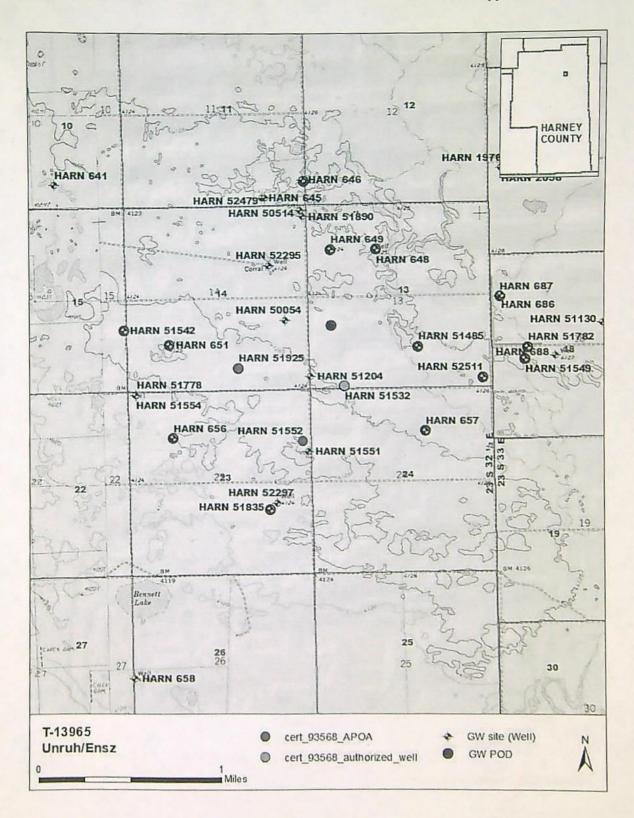

5.	 a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with another surface water source? Yes No Comments: There are no perennial surface water sources in the vicinity of the authorized or proposed wells.
	b) If yes, at its maximum allowed rate of use, what is the expected change in degree of interference with any surface water sources resulting from the proposed change?
	Stream: Minimal Significant
	Stream:
6.	For SW-GW transfers, will the proposed change in point of diversion affect the surface water source similarly (as per OAR 690-380-2130) to the authorized point of diversion specified in the water use subject to transfer? Yes No Comments:
7.	What conditions or other changes in the application are necessary to address any potential issues identified above: <u>none.</u>
8.	Any additional comments: none.

	a.	within and pre inspect	the current place of use boundary of the water right proposed for transfer, eviously demonstrated to the Department through monitoring and site tions by the Watermaster that the proposed transfer will not result in injury argement? Yes No If "Yes", explain:
	b.	same la	remporary transfer of this nature been previously filed and approved on the ands (or portions thereof) as those lands involved in this transfer? No If "Yes", answer the following:
		i.	Were there any problems with more acres being irrigated (or wetted) than were authorized under the temporary transfer? Yes No If "Yes", explain:
		n.	Did the designated areas that were to remain dry (or not wetted) under the temporary transfer actually remain dry? Yes No If "No", explain:
		iii.	Did the applicant comply with and meet all of the conditions of the temporary transfer? Yes No If "No", explain:
		iv.	Do you have any other observations regarding the temporary transfer? Yes No If "Yes", describe:
		v.	Did the applicant demonstrate to the Department through monitoring and site inspections by the Watermaster that neither injury nor enlargement occurred as a result of the temporary transfer? Yes No If "No", explain:
	c.	To the	best of your knowledge, if this transfer is approved, does it appear that:
		i.	"Injury" will occur to other water rights that share the same source? Yes No If "Yes", explain:
		ii.	"Enlargement" of the water right being transferred will occur? Yes No If "Yes", explain:
12.	in dete		er issues not identified through the above questions that should be considered whether the change "can be effected without injury to other rights"? If "Yes", explain:

13.	What alternatives may be available for addressing any issues identified above:					
14.	Do conditions need to be included in the transfer order to avoid enlargement of the right or injury to other rights? No Yes, as checked and provided below:					
	For POU changes that involve micro-irrigation, provide the monitoring and reporting conditions necessary to prevent injury/enlargement:					
	A Headgate should be required prior to diverting water.					
	Measurement Devices for POD or POA: (if this condition is selected, also fill in the top sections of Page 4)					
	a. Before water use may begin under this order, the water user shall install a totalizing flow meter*, or, with prior approval of the Director, another suitable measuring device, at each point of diversion/appropriation (new and existing) OR at each new point of diversion/appropriation with the exception that water rights issued to the Bureau of Reclamation or an irrigation district (or similar entity) are not subject to this condition.					
	b. The water user shall maintain the meters or measuring devices in good working order.					
	c. The water user shall allow the Watermaster access to the meters or measuring devices; provided however, where the meters or measuring devices are located within a private structure, the Watermaster shall request access upon reasonable notice.					
	Reservoir water use measurement: (if this condition is selected, also fill in the top sections of Page 4)					
	a. Before water use may begin under this order, the water user shall install staff qages*, or, with prior approval of the Director, other suitable measuring devices, that measure the entire range and stage between empty and full in each reservoir. Staff gages shall be United States Geological Survey style.					
	b. Before water use may begin under this order, if the reservoir is located in channel, weirs or other suitable measuring devices must be installed upstream and downstream of the reservoir, and, an adjustable outlet valve must be installed. The water user shall maintain such devices in good working order. A written waiver may be obtained, if in the judgment of the Director, the installation of weirs or other suitable measuring devices, or the adjustable outlet valve, will provide no public benefit.					
*	The following alternative device(s) should be substituted for the bold, underlined device in the above selected condition:					
	Parshall Flume Flow Restrictor					
	Other:

Reference: Application T-13965

On April 4, 2022, OWRD received your water right Temporary Transfer Application. The application was accompanied by \$1898.05. Our receipt number 137834 is enclosed.

By copy of this letter, we are asking the Watermaster for a report regarding the potential for injury to existing water rights which may be caused by the requested change.

Except as provided under ORS 540.510(3) for municipalities, you may not *temporarily* use water at the new place of use or from the new point of diversion/appropriation until a final order approving the temporary transfer application has been issued by the Department. Additionally, pursuant to OAR 690-380-8010, the lands <u>from</u> which an irrigation water right is to be temporarily transferred and the land <u>to</u> which the right is to be temporarily transferred may not both receive water during the same season. If the temporary transfer is approved during an irrigation season and water has already been used at the currently authorized location during that season, then the temporary transfer will not take effect until the following season.

If the land is sold before the temporary transfer is approved, the buyer's consent to the temporary transfer will be required unless a recorded deed or other legal document clearly established that the water right was not conveyed in the sale.

If you have any questions, please contact the Transfer Section at (503) 979-9931.

TACS

Part 2 of 5 - Temporary Transfer Application Map Checklist

Your temporary transfer application <u>will be returned</u> if any of the map requirements listed below are not met.

Please be sure that the temporary transfer application map you submit includes all the required items and matches the existing water right map. Check all boxes that apply. If more than three water rights are involved, separate maps are needed for each water right. \boxtimes Permanent quality printed with dark ink on good quality paper. X The size of the map can be 8½ x 11 inches, 8½ x 14 inches, 11 x 17 inches, or up to 30 x 30 inches. For 30 x 30 inch maps, one extra copy is required. X A north arrow, a legend, and scale. \boxtimes The scale of the map must be: 1 inch = 400 feet, 1 inch = 1,320 feet; the scale of the Final Proof/Claim of Beneficial Use Map (the map used when the permit was certificated); the scale of the county assessor map if the scale is not smaller than 1 inch = 1,320 feet; or a scale that has been pre-approved by the Department. X Township, Range, Section, ¼ ¼, DLC, Government Lot, and other recognized public land survey lines. \boxtimes Tax lot boundaries (property lines) are required. Tax lot numbers are recommended. X Major physical features including rivers and creeks showing direction of flow, lakes and reservoirs, roads, and railroads. X Major water delivery system features from the point(s) of diversion/appropriation such as main pipelines, canals, and ditches. X Existing place of use that includes separate hachuring for each water right, priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions. If less than the entirety of the water right is being changed, a separate hachuring is needed for lands left unchanged. Proposed temporary place of use that includes separate hachuring for each water right, M N/A priority date, and use including number of acres in each quarter-quarter section, government lot, or in each quarter-quarter section as projected within government lots, donation land claims, or other recognized public land survey subdivisions. X Existing point(s) of diversion or well(s) with distance and bearing or coordinates from a recognized survey corner. This information can be found in your water right certificate or permit. □ N/A If you are proposing a change in point(s) of diversion or well(s) to convey water to the new \boxtimes temporary place of use, show the proposed location and label it clearly with distance and bearing or coordinates. If GPS coordinates are used, latitude-longitude coordinates may be expressed as either degrees-minutes-seconds with at least one digit after the decimal (example - 42°32'15.5") or degrees-decimal with five or more digits after the decimal (example - 42.53764°).

	No: enter 0 on line 4 » » » » » » » » » » » » » » » »		
	Yes: enter the number of acres in the footprint of the place of use for the		
	portions of the rights to be transferred: 121.5 (4a)		
4	Multiply the number of acres in 4a above by \$2.70 and enter on line 4 » »	4	\$328.05
5	Add entries on lines 1 through 4 above » » » » » » » » » » Subtotal:	5	\$1898.05
	Is this transfer:		
	necessary to complete a project funded by the Oregon Watershed		
	Enhancement Board (OWEB) under ORS 541.932?		
	endorsed in writing by ODFW as a change that will result in a net benefit to		
	fish and wildlife habitat?		
	If one or more boxes is checked, multiply line 5 by 0.5 and enter on line 6 »		
6	If no box is applicable, enter 0 on line 7» » » » » » » » » » » » » » »	6	
7	Subtract line 6 from line 5 » » » » » » » » » » » » Transfer Fee:	7	\$1898.05

	FEE WORKSHEET for TEMPORARY DROUGHT TRANSFERS		
1	Base Fee (includes drought application and recording fee for up to 1 cfs)	1	\$200.00
N	Enter the cfs for the portions of the rights to be transferred (see example below*):		
	(2a)		
	Subtract 1.0 from the number in 2a above:(2b)		
	If 2b is 0, enter 0 on line 2 » » » » » » » » » » » » » » » »		
	If 2b is greater than 0, round up to the nearest whole number:(2c) and		
2	multiply 2c by \$50, then enter on line 2 » » » » » » » » »	2	
3	Add entries on lines 1 through 2 above » » » » » » » » » Transfer Fee:	3	

^{*}Example for Line 2a calculation to transfer 45.0 acres of Primary Certificate 12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Certificate 87654 (1/80 cfs per acre) on the same land:

- 1. Divide total authorized cfs by total acres in the water right (for C12345, 1.25 cfs +100 ac); then multiply by the number of acres to be transferred to get the transfer cfs (x 45 ac= 0.56 cfs).
- 2. If the water right certificate does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (For C87654, 45.0 ac x 0.0125 cfs/ac = 0.56 cfs)
- 3. Add cfs for the portions of water rights on all the land included in the transfer; however do not count cfs for supplemental rights on acreage for which you have already calculated the cfs fee for the primary right on the same land. The fee should be assessed only once for each "on the ground" acre included in the transfer. (In this example, blank 2a would be only 0.56 cfs, since both rights serve the same 45.0 acres. Blank 2b would be 0 and Line 2 would then also become 0).

CERTIFICATE OF WATER RIGHT

OWRD

THIS CERTIFICATE ISSUED TO

JOHN ENSZ FARMS LLC 25209 HIPWELL LN GRAND VIEW ID 83624

confirms the right to the use of water perfected under the terms of Permit G-17671. The amount of water used to which this right is entitled is limited to the amount used beneficially, and shall not exceed the amount specified, or its equivalent in the case of rotation, measured at the point of diversion from the source. The specific limits and conditions of the use are listed below.

APPLICATION FILE NUMBER: G-16826

SOURCE OF WATER: 2 WELLS IN MALHEUR SLOUGH BASIN

PURPOSE or USE: IRRIGATION USE ON 160.0 ACRES
MAXIMUM RATE: 1.89 CUBIC FEET PER SECOND

PERIOD OF USE: MARCH 1 THROUGH OCTOBER 31

DATE OF PRIORITY: APRIL 9, 2007

The wells are located as follows:

Twp	Rng	Mer	Sec	Q-Q	Measured Distances
23 S	32.5 E	WM	14	SW SE	WELL 3 – 620 FEET NORTH AND 530 FEET EAST FROM S1/4 CORNER, SECTION 14
23 S	32.5 E	WM	23	SE NE	WELL 2 - 1500 FEET SOUTH AND 225 FEET WEST FROM NE CORNER, SECTION 23

The amount of water used for irrigation under this right, together with the amount secured under any other right existing for the same lands, is limited to a diversion of ONE-EIGHTIETH of one cubic foot per second and 3.0 acre-feet for each acre irrigated during the irrigation season of each year.

A description of the place of use is as follows:

Twp	Rng	Mer	Sec	Q-Q	Acres
23 S	32.5 E	WM	23	NE NE	40.0
23 S	32.5 E	WM	23	NW NE	40.0
23 S	32.5 E	WM	23	SW NE	40.0
23 S	32.5 E	WM	23	SE NE	40.0

NOTICE OF RIGHT TO PETITION FOR RECONSIDERATION OR JUDICIAL REVIEW

This is an order in other than a contested case. This order is subject to judicial review under ORS 183.484 and ORS 536.075. Any petition for judicial review must be filed within the 60-day time period specified by ORS 183.484(2). Pursuant to ORS 183.484, ORS 536.075 and OAR 137-004-0080, you may petition for judicial review and petition the Director for reconsideration of this order. A petition for reconsideration may be granted or denied by the Director, and if no action is taken within 60 days following the date the petition was filed, the petition shall be deemed denied. In addition, under ORS 537.260 any person with an application, permit or water right certificate subsequent in priority may jointly or severally contest the issuance of the certificate within three months after issuance of the certificate.

Application G-16826.jls

Page 1 of 3

The combined quantity of water diverted at the new points of appropriation, together with that diverted at the old point of appropriation, shall not exceed the quantity of water lawfully available at the original point of appropriation as follows:

Twp	Rng	Mer	Sec	Q-Q	Measured Distances
23 S	32.5 E	WM	23	SE NE	WELL 1 – 1584 FEET SOUTH AND 10 FEET WEST FROM NE CORNER, SECTION 23

Water shall be acquired from the same aquifer as the original points of appropriation.

Measurement, recording and reporting conditions:

- A. The water user shall maintain the totalizing flow meter or other suitable measuring device approved by the Director in good working order, shall keep a complete record of the amount of water used each month, and shall submit a report which includes the recorded water use measurements to the Department annually or more frequently as may be required by the Director. Further, the Director may require the water user to report general water-use information, including the place and nature of use of water under the right.
- B. The water user shall allow the watermaster access to the meter or measuring device; provided however, where the meter or measuring device is located within a private structure, the watermaster shall request access upon reasonable notice.

The Department requires the water user to obtain, from a qualified individual (see below), and report annual static water levels for each well on the right. The static water level shall be measured in the month of March. Reports shall be submitted to the Department within 30 days of measurement.

The water user shall report annual March static water-level measurements whether or not the well is used. The reference level against which future measurements will be compared is 37.0 feet below ground surface for Well 2 and 38.5 feet below ground surface for Well 3. The Director may require the user to obtain and report additional water levels each year if more data are needed to evaluate the aquifer system.

All measurements shall be made by a certified water rights examiner, registered professional geologist, registered professional engineer, licensed well constructor or pump installer licensed by the Construction Contractors Board. Measurements shall be submitted on forms provided by, or specified by, the Department. Measurements shall be made with equipment that is accurate to at least the standards specified in OAR 690-217-0045. The Department requires the individual performing the measurement to:

- A. Associate each measurement with an owner's well name or number and a Department well log ID; and
- B. Report water levels to at least the nearest tenth of a foot as depth-to-water below ground surface; and
- C. Specify the method of measurement; and
- D. Certify the accuracy of all measurements and calculations reported to the Department.

The water user shall discontinue use of, or reduce the rate or volume of withdrawal from, the well(s) if any of the following events occur:

- Annual water-level measurements reveal an average water-level decline of three or more feet per year for five consecutive years; or
- Annual water-level measurements reveal a water-level decline of 15 or more feet in fewer than five consecutive years; or
- Annual water-level measurements reveal a water-level decline of 25 or more feet; or
- D. Hydraulic interference leads to a decline of 25 or more feet in any neighboring well with senior priority.

RECEIVED

APR 0 4 2022

Page 2 of 3

OWRD

The period of restricted use shall continue until the water level rises above the decline level which triggered the action or the Department determines, based on the water user's and/or the Department's data and analysis, that no action is necessary because the aquifer in question can sustain the observed declines without adversely impacting the resource or causing substantial interference with senior water rights. The water user shall not allow excessive decline, as defined in Commission rules, to occur within the aquifer as a result of use under this right. If more than one well is involved, the water user may submit an alternative measurement and reporting plan for review and approval by the Department.

Failure to comply with any of the provisions of this right may result in action including, but not limited to, restrictions on the use, civil penalties, or cancellation of the right.

If substantial interference with a senior water right occurs due to withdrawal of water from any well listed on this right, then use of water from the well(s) shall be discontinued or reduced and/or the schedule of withdrawal shall be regulated until or unless the Department approves or implements an alternative administrative action to mitigate the interference. The Department encourages junior and senior appropriators to jointly develop plans to mitigate interferences.

The well(s) shall be maintained in accordance with the General Standards for the Construction and Maintenance of Water Wells in Oregon. The works shall be equipped with a usable access port, and may also include an air line and pressure gauge adequate to determine the water level elevation in the well at all times.

The use may be restricted if the quality of the source stream or downstream waters decrease to the point that those waters no longer meet existing state or federal water quality standards due to reduced flows.

Where two or more water users agree among themselves as to the manner of rotation in the use of water and such agreement is placed in writing and filed by such water users with the watermaster, and such rotation system does not infringe upon such prior rights of any water user not a party to such rotation plan, the watermaster shall distribute the water according to such agreement.

The Director may require water level or pump test results every ten years.

This right is for the beneficial use of water without waste. The water user is advised that new regulations may require the use of best practical technologies or conservation practices to achieve this end.

By law, the land use associated with this water use must be in compliance with statewide land-use goals and any local acknowledged land-use plan.

The use of water shall be limited when it interferes with any prior surface or ground water right.

This right does not allow unauthorized inundation of property not under the ownership of the water right holder.

The right to the use of the water for the above purpose is restricted to beneficial use on the place of use described.

Measurement, recording and reporting conditions:

OWRD

- A. The water user shall maintain, in good working order, a totalizing flow meter or other suitable measuring device as approved by the Director at each point of appropriation, shall keep a complete record of the amount of water used each month, and shall submit a report which includes the recorded water use measurements to the Department annually or more frequently as may be required by the Director. Further, the Director may require the water user to report general water-use information, including the place and nature of use of water under the right.
- C. The water user shall allow the watermaster access to the meter or measuring device; provided however, where the meter or measuring device is located within a private structure, the watermaster shall request access upon reasonable notice.

The Department requires the water user to obtain, from a qualified individual (see below), and report annual static water levels for each well on the right. The static water level shall be measured in the month of March. Reports shall be submitted to the Department within 30 days of measurement.

The water user shall report annual March static water-level measurements whether or not the well is used. The reference level against which future measurements will be compared is 24.5 feet below land surface. The Director may require the user to obtain and report additional water levels each year if more data are needed to evaluate the aquifer system.

All measurements shall be made by a certified water rights examiner, registered professional geologist, registered professional engineer, licensed well constructor or pump installer licensed by the Construction Contractors Board. Measurements shall be submitted on forms provided by, or specified by, the Department. Measurements shall be made with equipment that is accurate to at least the standards specified in OAR 690-217-0045. The Department requires the individual performing the measurement to:

- A. Associate each measurement with an owner's well name or number and a Department well log ID; and
- B. Report water levels to at least the nearest tenth of a foot as depth-to-water below ground surface; and
- C. Specify the method of measurement; and
- Certify the accuracy of all measurements and calculations reported to the Department.

The water user shall discontinue use of, or reduce the rate or volume of withdrawal from, the well(s) if any of the following events occur:

- Annual water-level measurements reveal an average water-level decline of three or more feet per year for five consecutive years; or
- Annual water-level measurements reveal a water-level decline of 15 or more feet in fewer than five consecutive years; or
- Annual water-level measurements reveal a water-level decline of 25 or more feet; or
- Hydraulic interference leads to a decline of 25 or more feet in any neighboring well with senior priority.

The period of restricted use shall continue until the water level rises above the decline level which triggered the action or until the Department determines, based on the water user's and/or the Department's data and analysis, that no action is necessary because the aquifer in question can sustain the observed declines without adversely impacting the resource or causing substantial with senior water rights. The water user shall not allow excessive decline, as defined in Commission rules, to occur within the aquifer as a result of use under this right. If more than one well is involved, the water user may submit an alternative measurement and reporting plan for review and approval by the Department.

The water user shall ensure that the well has been assigned an OWRD Well Identification Number (Well ID tag), which shall be permanently attached to the well. The Well ID shall be used as a reference in any correspondence regarding the well, including any reports of water use, water level, or pump test data.

Failure to comply with any of the provisions of this right may result in action including, but not limited to, restrictions on the use, civil penalties, or cancellation of the right.

Application G-16961.mfb

Page 2 of 3

If substantial interference with a senior water right occurs due to withdrawal of water from any well listed on this right, then use of water from the well(s) shall be discontinued or reduced and/or the schedule of withdrawal shall be regulated until or unless the Department approves or implements an alternative administrative action to mitigate the interference. The Department encourages junior and senior appropriators to jointly develop plans to mitigate interferences.

The well(s) shall be maintained in accordance with the General Standards for the Construction and Maintenance of Water Wells in Oregon. The works shall be equipped with a usable access port, and may also include an air line and pressure gauge adequate to determine the water level elevation in the well at all times.

The use may be restricted if the quality of the downstream waters decreases to the point that those waters no longer meet existing state or federal water quality standards due to reduced flows

Where two or more water users agree among themselves as to the manner of rotation in the use of water and such agreement is placed in writing and filed by such water users with the watermaster, and such rotation system does not infringe upon such prior rights of any water user not a party to such rotation plan, the watermaster shall distribute the water according to the agreement.

The Director may require water level or pump test results every ten years.

This right is for the beneficial use of water without waste. The water user is advised that new regulations may require the use of best practical technologies or conservation practices to achieve this end.

By law, the land use associated with this water use must be in compliance with statewide land-use goals and any local acknowledged land-use plan.

The use of water shall be limited when it interferes with any prior surface or ground water rights.

The right to the use of the water for the above purpose is restricted to beneficial use on the place of use described.

Issued

FEB. 2 2018

Dwight Fr

Water Right Services Division Administrator, for

Land Use Information Form

Oregon Water Resources Department 725 Summer Street NE, Suite A Salem, Oregon 97301-1266 (503) 986-0900 www.oregon.gov/OWRD

NOTE TO APPLICANTS

In order for your application to be processed by the Water Resources Department (WRD), this Land Use Information Form must be completed by a local government planning official in the jurisdiction(s) where your water right will be used and developed. The planning official may choose to complete the form while you wait, or return the receipt stub to you. Applications received by WRD without the Land Use Form or the receipt stub will be returned to you. Please be aware that your application will not be approved without land use approval.

This form is NOT required if:

- 1) Water is to be diverted, conveyed, and/or used only on federal lands; OR
- 2) The application is for a water right transfer, allocation of conserved water, exchange, permit amendment, or ground water registration modification, and <u>all</u> of the following apply:
 - The existing and proposed water use is located entirely within lands zoned for exclusive farm-use or within an irrigation district;
 - b) The application involves a change in place of use only;
 - The change does not involve the placement or modification of structures, including but not limited to water diversion, impoundment, distribution facilities, water wells and well houses; and
 - d) The application involves irrigation water uses only.

NOTE TO LOCAL GOVERNMENTS

The person presenting the attached Land Use Information Form is applying for or modifying a water right. The Water Resources Department (WRD) requires its applicants to obtain land-use information to be sure the water rights do not result in land uses that are incompatible with your comprehensive plan. Please complete the form or detach the receipt stub and return it to the applicant for inclusion in their water right application. You will receive notice once the applicant formally submits his or her request to the WRD. The notice will give more information about WRD's water rights process and provide additional comment opportunities. You will have 30 days from the date of the notice to complete the land-use form and return it to the WRD. If no land-use information is received from you within that 30-day period, the WRD may presume the land use associated with the proposed water right is compatible with your comprehensive plan. Your attention to this request for information is greatly appreciated by the Water Resources Department. If you have any questions concerning this form, please contact the WRD's Customer Service Group at 503-986-0801.
