Summary of Same Source Review:

- ☐ The proposed change in point of appropriation is not within the same aquifer as per OAR 690-380-2110(2).

Summary of Injury Review:

- ☐ The proposed transfer will result in another, existing water right not receiving previously available water to which it is legally entitled or result in significant interference with a surface water source as per 690-380-0100(3).

Summary of GW-SW Transfer Similarity Review:

- ☐ The proposed SW-GW transfer doesn't meet the definition of "similarly" as per OAR 690-380-2130.

The information provided in the application is insufficient to evaluate whether the proposed transfer may be approved because:

- ☐ The water well reports provided with the application do not correspond to the water rights affected by the transfer.
- ☐ The application does not include water well reports or a description of the well construction details sufficient to establish the ground water body developed or proposed to be developed.
- ☐ Other _____

1. Basic description of the changes proposed in this transfer: The proposed transfer modifies POAs authorized under Permit G-18781. Permit G-18781 has a priority date of July 25, 1979 for irrigation of 99.0 acres by the currently authorized POAs (CLAC 8769, Well 1; and CLAC 8774, Well 2) and maximum combined rate of 1.24 cfs (0.74 cfs from Well 1 and 0.50 from Well 2).

The proposed transfer would replace the authorized POAs with CLAC 8770 (Well 3) and another to-be-constructed POA (either Well 4a or Well 4b). The transfer would also modify the POU by 6.2 acres.

2. Will the proposed POA develop the same aquifer (source) as the existing authorized POA?
☒ Yes ☐ No Comments: Depth to bedrock (Columbia River Basalt) near the POAs is approximately 800 to 850 feet below land surface (bls). The authorized POAs (CLAC 8769 and CLAC 8774) obtain groundwater from the alluvial aquifer system, more specifically the Willamette silt or Willamette aquifer as described by Gannett and Caldwell (1998). CLAC 8770 and the proposed construction for Well 4a/4b would similarly develop the Willamette silt and/or Willamette aquifer, which are considered to be part of a single alluvial aquifer system within this area of the Willamette Basin.

3. a) Is there more than one source developed under the right (e.g., basalt and alluvium)?
☐ Yes ☒ No _____
- b) If yes, estimate the portion of the right supplied by each of the sources and describe any limitations that will need to be placed on the proposed change (rate, duty, etc.): N/A
4. a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with **another ground water right**?
☐ Yes ☒ No Comments: Several wells were identified near the proposed POAs that could be affected by the proposed change, including CLAC 53863, CLAC 8783, CLAC 8808, and CLAC 8784. The currently authorized POAs, CLAC 8769 and CLAC 8774, are completed to depths of 170 and 203 feet bls respectively. The proposed POA CLAC 8770 is completed to a depth of 205 feet bls and proposed construction for Well 4a and Well 4b would also be completed to 205 feet bls. Therefore, the POAs and nearby wells that will likely be affected by the proposed use do not fully penetrate the sedimentary aquifer in this area, which the USGS estimates at ~800-850 feet thick (Gannett and Caldwell, 1998). Consequently, injury due to the proposed change would not be found because the potentially-affected well(s) do not fully penetrate the shared aquifer (OAR 690-008-0001(8)(c)).
- b) If yes, would this proposed change, at its maximum allowed rate of use, likely result in another groundwater right not receiving the water to which it is legally entitled?
☐ Yes ☐ No If yes, explain: N/A
5. a) Will this proposed change, at its maximum allowed rate of use, likely result in an increase in interference with **another surface water source**?
☒ Yes ☐ No Comments: An unnamed tributary to the Pudding River is approximately 4,500 to 5,000 feet southeast of the authorized POAs, CLAC 8769 and CLAC 8774. The nearest proposed POA, CLAC 8770, is located 3,200 feet from the unnamed tributary to Pudding River. Based on the reduced intervening distances, the proposed change would likely result in an increase in interference with this unnamed tributary to the Pudding River.
- b) If yes, at its maximum allowed rate of use, what is the expected change in degree of interference with any **surface water sources** resulting from the proposed change?
Stream: Unnamed Tributary to the Pudding River ☒ Minimal ☐ Significant

Provide context for minimal/significant impact: The Hunt 2003 analytical stream depletion model was used to estimate interference at the unnamed tributary to the Pudding River caused by pumping the proposed and authorized POAs to estimate the maximum anticipated interference, based on proximity and similar hydrologic conditions. Model parameters are derived from nearby pumping tests (CLAC 18450, CLAC 8758, CLAC 53111, and CLAC 8770) and published values (Freeze and Cherry, 1979). Due to the thickness of fine-grained sediments between the bottom of the streambed for the Pudding River and associated tributaries and the top of the water-bearing zones tapped by the proposed APOAs, and the distance from the stream, the change in degree of interference due to the proposed transfer is estimated to be minimal.

6. For SW-GW transfers, will the proposed change in point of diversion affect the surface water source similarly (as per OAR 690-380-2130) to the authorized point of diversion specified in the water use subject to transfer?
☐ Yes ☐ No Comments: Not applicable.
7. What conditions or other changes in the application are necessary to address any potential issues identified above: None.
8. Any additional comments: None.

Part 3 of 5 – Fee Worksheet

[illegible]

*Example for Line 5a calculation to transfer 45.0 acres of Primary Permit S-12345 (total 1.25 cfs for 100 acres) and 45.0 acres of Supplemental Permit S-87654 (1/80 cfs per acre) on the same land:

1. For irrigation calculate cfs for each permit involved as follows:
 - a. Divide total authorized cfs by total acres in the permit (*for S-12345, 1.25 cfs ÷ 100 ac*); then multiply by the number of acres to be changed to get the application cfs ($\times 45 \text{ ac} = 0.56 \text{ cfs}$).
 - b. If the water right permit does not list total cfs, but identifies the allowable use as 1/40 or 1/80 of a cfs per acre; multiply number of acres proposed for change by either 0.025 (1/40) or 0.0125 (1/80). (*For S-87654, 45.0 ac \times 0.0125 cfs/ac = 0.56 cfs*)
2. Add cfs for the portions of permits on all the land included in the application; however **do not count cfs for supplemental permits on acreage for which you have already calculated the cfs fee for the primary permit on the same land.** The fee should be assessed only once for each "on the ground" acre included in the application. (*In this example, blank 5a would be only 0.56 cfs, since both permits serve the same 45.0 acres. Blank 5b would be 0 and Line 5 would then also become 0.*)

Explain in your own words what you propose to accomplish with this permit amendment; and why:

The Applicant is proposing to change the point of appropriation for Well 1 (0.74 cfs) and Well 2 (0.50 cfs) to Well 3 and to Well 4a or 4b, for a total of not to exceed 1.24 cfs from any of the proposed points of appropriation. The Applicant also proposes to change the place of use of 6.2 acres of the permit.

Permit # G-18781

Are there other water rights certificates, water use permits or ground water registrations associated with the "from" or "to" lands? ☐ Yes ☒ No

If YES, list the other certificate, permit, or ground water registration numbers: N/A

If the permit(s) are for irrigation or supplemental irrigation use, other water rights existing on the same land for irrigation that are subject to transfer must either change concurrently or be cancelled. Any change to a water right certificate or ground water registration must be filed separately in a water right transfer application or ground water registration modification application, respectively.

For a change in point(s) of appropriation (well(s)) or additional point(s) of appropriation:

- ☒ Well log(s) are attached for each authorized and proposed well(s) that are clearly labeled and associated with the corresponding well(s) in Table 1 above and on the accompanying application map. (Tip: You may search for well logs on the Department's web page at: http://apps.wrd.state.or.us/apps/gw/well_log/Default.aspx)

AND/OR

- ☒ Describe the construction of the authorized and proposed well(s) in Table 3 for any wells that do not have a well log. For *proposed wells not yet constructed or built*, provide "a best estimate" for each requested information element in the table. The Department recommends you consult a licensed well driller, geologist, or certified water right examiner to assist with assembling the information necessary to complete Table 3.

Table 3. Construction of Point(s) of Appropriation

Any well(s) in this listing must be clearly tied to corresponding well(s) described in Table 1 and shown on the accompanying application map. Failure to provide the information will delay the processing of your transfer application until it is received. The information is necessary for the department to assess whether the proposed well(s) will access the same source aquifer as the authorized point(s) of appropriation (POA). The Department is prohibited by law from approving POA changes that do not access the same source aquifer.

On April 24, 2023, OWRD received your water right Permit Amendment Application. The application was accompanied by \$3,750.00. Our receipt number 140566 is enclosed.

By copy of this letter, we are asking the Watermaster for a report regarding the potential for injury to existing water rights which may be caused by the requested change. A review form will also be sent to our groundwater staff to determine whether the proposed well accesses the same source of water as the original well.

This application may require publication of a notice for two consecutive weeks in a newspaper with general circulation in the area where the water right is located. If it is determined that newspaper notice will be required, the Department will prepare the notice and notify you of the cost. You will be responsible for submitting payment to the Department prior to publication of the notice.

Except as provided under ORS 540.510(3) for municipalities, you may not use water in the new place of use or from the new point of appropriation until a final order approving the application has been issued by the Department.

Refer to the following page for a chart showing the steps and expected timelines for the processing of your application.
