7. Diminishment of a certain Water Right during the 2007 Irrigation Season

On April 19, 2007, Stacey Wells, authorized representative for Westland Irrigation District, stated that 16.0 acres exist on the “TO” lands and shall be diminished from primary irrigation to supplemental irrigation for the incoming district primary water rights under Certificates 76715 and 76717, for the duration of the temporary transfer. Those lands are described in the following table:

DIMINISHMENT TO SUPPLEMENTAL IRRIGATION (IS) - CERTIFICATE 82441						
TWP	RNG	MER	SEC	QTR - QTR	TL	ACRES
3 N	29 E	WM	18	NW NW	5600	16.0

8. The district temporary transfer application satisfies the criteria of OAR 690-385-4000, contains the information required under OAR 690-385-2000, and includes maps meeting the requirements of OAR 690-385-2200.
9. The water rights are subject to transfer as defined in OAR 690-385-0100(17).
10. The proposed change in place of use would not result in enlargement of the rights.
11. The proposed changes in place of use would not result in injury to other rights.

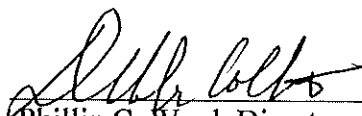

Conclusions of Law

1. The proposed change in place of use in Transfer Application T-10345 satisfies the requirements of ORS 540.574(3) and 540.570.
2. The portions of the right described in Findings of Fact #7 will be diminished to supplemental irrigation during the 2007 irrigation season.

Now, therefore, it is ORDERED:

1. The proposed changes to the water rights evidenced by Certificates 76715, 76717, 79439 and 82441 are approved.
2. The temporary transfer is effective for the 2007 irrigation season.
3. The right to the use of the water is restricted to beneficial use at the place of use described and is subject to all other conditions and limitations contained in Certificates 76715, 76717, 79439, 82441 and any related decree.
4. Pursuant to OAR 690-385-3130, the use of water for supplemental irrigation at the proposed place of use under Certificate 82441, as described in Findings of Fact #7, is restricted to the total rate and duty described by Certificate 76715 and 76717, and may be used only to make up a deficiency of supply.
5. The use of water on the lands from which the water right is transferred and at the new temporary place of use during the same irrigation season or calendar year is prohibited and may subject the district and landowner to civil penalties.
6. The use of water under this temporary transfer may be conditioned or revoked at any time to the extent necessary to avoid injury if the Department finds the transfer causes injury to any existing water right.
7. At the end of the 2007 irrigation season all uses of water under this temporary transfer revert automatically to the terms and conditions of the original water right permit, certificate, or adjudication as evidenced by a court decree.

Watermaster Review Form: Water Right Transfer

Transfer Application: T-10345

Review Due Date: Rec'd 4/16/07

Applicant Name: Westland Irrigation District

Proposed Changes: ☒ POU ☐ POD ☐ POA ☐ USE ☐ OTHER

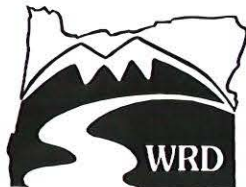

Reviewer(s): Paul Hendricks

Date of Review: Apr. 24, 2007

1. Do you have information suggesting that the water rights may be subject to forfeiture?
☐ Yes ☒ No If "Yes", describe the information and indicate if you intend to file a cancellation affidavit or if you need additional time to determine if a cancellation affidavit should be filed: _____
2. Is there a history of regulation on the source that serves the right proposed for transfer that has involved the right and downstream water rights? ☒ Yes ☐ No Generally characterize the frequency of any regulation or explain why regulation has not occurred: Westland Irrigation District is regulated every year on the Umatilla River by priority date (usually 1900) and is part of the Accumulation / Rotation on the Mid-Umatilla River. The R Accumulation / Rotation begins when Westland Irrigation District begins using McKay permit 7400 stored water when demand is greater than live flow available.
3. Check here if it appears that downstream water rights benefit from return flows resulting from the current use of the right? ☒ If you check the box, generally characterize the locations where the return flows likely occur and list the water rights that benefit most: The return flows would probably enter the river between Echo and I-84. The major water rights that could benefit would be, (City of Stanfield, Mills Mint, Hermiston Irrigation District 1894) (The Dillion Canal 1897) and Hermiston Irrigation District 1904. It doesn't appear that they return flows would be impacted since the to and from lands are located in the same field except for the 1.5 acres in 3n28e sec. 23.
4. Are there upstream water rights that would be affected by the proposed change?
☐ Yes ☒ No If "Yes", describe how the rights would be affected and list the rights most affected: _____
5. For POD changes and instream transfers, check here if there are channel losses between the old and new PODs or within the proposed instream reach? ☐ If you check the box, describe and, if possible, estimate the losses: _____
6. Would distribution of water for the right after the proposed change result in regulation of other water rights that would not have occurred if use of the existing right was maximized?
☐ Yes ☒ No If "Yes", explain: _____
7. For POU changes, would the original place of use continue to receive water from the same source? ☐ Yes ☒ No ☐ N/A If "Yes", explain: The original place of use must not be irrigated this season and dried up.

8. For POU or USE changes, would use of the existing right at "full face value," result in the diversion of more water than can be used beneficially and without waste? ☐ Yes ☒ No
If "Yes", explain: _____
9. Are there other issues not identified through the above questions? ☐ Yes ☒ No If
"Yes", explain: _____
10. What alternatives may be available for addressing any issues identified above: _____
11. Have headgate notices been issued for the source that serves the right? ☒ Yes ☐ No
12. What water control and measurement conditions should be included in the transfer:

Measurement Devices	☒ Present and should be maintained.	☐ Should be required prior to diverting water.	☐ May be required in the future.
Headgates	☒ Present and should be maintained.	☐ Should be required prior to diverting water.	☐ May be required in the future.
