Additional remarks:Certificate 29525 is a change in the point of diversion from an unammed upland tributary of Lake Creek for to Lake Creek itself; this is a downstream move allowing for water to remain in the unammed upland tributary of Lake Creek improving habitat. Certificate 26542 is an additional point of diversion which is downstream of the authorized point of diversion and for a place of use change from this additonal point of diversion. The impetus behind these changes is water quality as the use of this water is for domestic purposes for Oregon Caves National Monument's domestic uses (residences, headquaters, offices, concession area,campgrounds, day use areas, visitor center, etc), hotel, and fire protection. The National Park Service has engineered a new low flow fish friendly infiltration gallery diversion and pipeline delivery system of which plans are attached to this application. Approval of this application improves the water quality for domestic water and reliability for fire protection puproses for the Oregon Caves National Monument and leaves water in stream for longer as all are downstream diversion moves from the authoirzed diversion locations The additional point of diversion is only temporary until construction is complete. A permanent transfer application will be completed in the future.
